# Another WB/IMF Insider Exposes Criminal Agenda

'CONFESSIONS OF AN ECONOMIC HITMAN'  
How the U.S. Uses Globalization  
To Cheat Poor Countries Out of Trillions

On the heels of the revelations of Joseph Stiglitz, former Chief Economist of the World Bank, last presented in the October 20, 2004 issue of this paper, we are now able to provide damning confirmation of the inner workings of the world's most august financial agencies.

The IMF/WB agenda is coldly calculated to control the people of the world through the "terrible power of the purse", as described in the Protocols, without any conscience whatsoever for the terrible human consequences of war, disease and starvation (which are just tools to accomplish the agenda). Understanding of these facts is prerequisite to being able to effect positive change.

Confessions of an Economic Hitman, by John Perkins, has been described by its publisher, Berrett-Koehler, as "An extraordinary, real-life tale of international intrigue and corruption ... [which] reveals the hidden mechanics of imperial control behind such major international events as the fall

of the Shah, the death of Panamanian president Omar Torrijos, and the invasions of Panama and Iraq, as well as providing an inside view of the corrupt U.S.-Saudi Arabian relationship. One man's personal journey from eager servant of empire to impassioned advocate for the rights of oppressed people."

From the book's Introduction:

"Economic Hit Men are highly paid professionals who cheat countries around the globe out of trillions of dollars. They funnel World Bank, U.S. government, and other foreign 'aid' funds into the coffers of international businesses and the pockets of a few wealthy families who control the planet's natural resources. Their tools include fraudulent financial reports, rigged elections, payoffs, extortion, and murder. They play a game as old as Empire but one that has taken on new and terrifying dimensions during this time of globalization.

"I should know; I was one."

We thank DemocracyNow.org for granting permission to reprint an interview they conducted with John Perkins on November 9, 2004.

DEMOCRACY NOW INTERVIEW  
WITH AUTHOR, JOHN PERKINS

Courtesy of <www.DemocracyNow.org>, 11/9/04

We speak with John Perkins, a former respected member of the international banking community. In his book *Confessions of an Economic Hit Man* he describes how as a highly paid professional, he helped the U.S. cheat poor countries around the globe out of trillions of dollars by lending them more money than they could possibly repay and then take over their economies.

John Perkins describes himself as a former economic hit man—a highly paid professional who cheated countries around the globe out of trillions of dollars.

20 years ago Perkins began writing a book with the working title, *Conscience of an Economic Hit Man*.

Perkins writes, "The book was to be dedicated to the presidents of two countries, men who had been his clients whom I respected and thought of as kindred spirits—Jaime Roldós, president of Ecuador, and Omar Torrijos, president of Panama. Both had just died in

fiery crashes. Their deaths were not accidental. They were assassinated because they opposed that fraternity of corporate, government, and banking heads whose goal is global empire. We Economic Hit Men failed to bring Roldós and Torrijos around, and the other type of hit men, the CIA-sanctioned jackals who were always right behind us, stepped in.”

John Perkins goes on to write: “I was persuaded to stop writing that book. I started it four more times during the next twenty years. On each occasion, my decision to begin again was influenced by current world events: the U.S. invasion of Panama in 1980, the first Gulf War, Somalia, and the rise of Osama bin Laden. However, threats or bribes always convinced me to stop.”

But now Perkins has finally published his story. The book is titled *Confessions of an Economic Hit Man*. John Perkins joins us now in our Firehouse studios.

John Perkins, from 1971 to 1981 he worked for the international consulting firm of Chas T. Main where he was a self-described “economic hit man”. He is the author of the new book *Confessions of an Economic Hit Man*.

### RUSH TRANSCRIPT

This transcript is available free of charge, however donations help us provide closed captioning for the deaf and hard of hearing on our TV broadcast. Thank you for your generous contribution. [*DemocracyNow.org*] In the following transcript, interviewer AMY GOODMAN and author JOHN PERKINS are indicated by their respective initials to save space.]

AG: John Perkins joins us now in our firehouse studio. Welcome to *Democracy Now!*

JP: Thank you, Amy. It’s great to be here.

AG: It’s good to have you with us. Okay, explain this term, “economic hit man”, e.h.m., as you call it.

JP: Basically what we were trained to do and what our job is to do is to build up the American empire. To bring—to create situations where as many resources as possible flow into this country, to our corporations, and our government, and in fact we’ve been very successful. We’ve built the largest empire in the history of the world. It’s been done over the last 50 years since World War II with very little military might, actually. It’s only in rare instances like Iraq where the military comes in as a last resort. This empire, unlike any other in the history of the world, has been built primarily through economic manipulation, through cheating, through fraud, through seducing people into our way of life, through the economic hit men. I was very much a part of that.

AG: How did you become one? Who did you work for?

JP: Well, I was initially recruited while I was in business school back in the late sixties by the National Security Agency [NSA, “Men in Black”], the nation’s largest and least understood spy organization; but ultimately I worked for private corporations. The first real economic hit man was back in the early 1950s, Kermit Roosevelt, the grandson of Teddy, who overthrew of government of Iran, a democratically elected government, Mossadegh’s government who was *Time*’s magazine person of the year; and he was so successful at doing this without any bloodshed—well, there was a little bloodshed, but no military intervention, just spending millions of dollars and replaced Mossadegh with the Shah of Iran. At that point, we understood that this idea of economic hit man was an extremely good one. We didn’t have to worry about the threat of war with Russia when we did it this

way. The problem with that was that Roosevelt was a C.I.A. agent. He was a government employee. Had he been caught, we would have been in a lot of trouble. It would have been very embarrassing. So, at that point, the decision was made to use organizations like the C.I.A. and the N.S.A. to recruit potential economic hit men like me and then send us to work for private consulting companies, engineering firms, construction companies, so that if we were caught, there would be no connection with the government.

AG: Okay. Explain the company you worked for.

JP: Well, the company I worked for was a company named Chas. T. Main in Boston, Massachusetts. We were about 2,000 employees, and I became its chief economist. I ended up having fifty people working for me. But my real job was deal-making. It was giving loans to other countries, huge loans, much bigger than they could possibly repay. One of the conditions of the loan—let’s say a \$1 billion to a country like Indonesia or Ecuador—and this country would then have to give ninety percent of that loan back to a U.S. company, or U.S. companies, to build the infrastructure—a Halliburton or a Bechtel. These were big ones. Those companies would then go in and build an electrical system or ports or highways, and these would basically serve just a few of the very wealthiest families in those countries. The poor people in those countries would be stuck ultimately with this amazing debt that they couldn’t possibly repay. A country today like Ecuador owes over fifty percent of its national budget just to pay down its debt. And it really can’t do it. So, we literally have them over a barrel. So, when we want more oil, we go to Ecuador and say, “Look, you’re not able to repay your debts, therefore give our oil companies your Amazon rain forest, which are filled with oil.” And today we’re going in and destroying Amazonian rain forests, forcing Ecuador to give them to us because they’ve accumulated all this debt. So we make this big loan, most of it comes back to the United States, the country is left with the debt plus lots of interest, and they basically become our servants, our slaves. It’s an empire. There’s no two ways about it. It’s a huge empire. It’s been extremely successful.

AG: We’re talking to John Perkins, author of *Confessions of an Economic Hit Man*. You say because of bribes and other reason you didn’t write this book for a long time. What do you mean? Who tried to bribe you, or who—what are the bribes you accepted?

JP: Well, I accepted a half a million dollar bribe in the nineties not to write the book.

AG: From?

JP: From a major construction engineering company.

AG: Which one?

JP: Legally speaking, it wasn’t—Stoner-Webster. Legally speaking it wasn’t a bribe, it was—I was being paid as a consultant. This is all very legal. But I essentially did nothing. It was a very understood, as I explained in *Confessions of an Economic Hit Man*, that it was—I was—it was understood when I accepted this money as a consultant to them I wouldn’t have to do much work, but I mustn’t write any books about the subject, which they were aware that I was in the process of writing this book, which at the time I called *Conscience of an Economic Hit Man*. And I have to tell you, Amy, that, you know, it’s an extraordinary story from the standpoint of—It’s almost James Bondish, truly, and I mean—

AG: Well that’s certainly how the book reads.

JP: Yeah, and it was, you know? And when the National Security Agency recruited me, they put me through a day of lie detector tests. They found out all

my weaknesses and immediately seduced me. They used the strongest drugs in our culture, sex, power and money, to win me over. I come from a very old New England family, Calvinist, steeped in amazingly strong moral values. I think I, you know, I’m a good person overall, and I think my story really shows how this system and these powerful drugs of sex, money and power can seduce people, because I certainly was seduced. And if I hadn’t lived this life as an economic hit man, I think I’d have a hard time believing that anybody does these things. And that’s why I wrote the book, because our country really needs to understand, if people in this nation understood what our foreign policy is really about, what foreign aid is about, how our corporations work, where our tax money goes, I know we will demand change.

AG: We’re talking to John Perkins. In your book, you talk about how you helped to implement a secret scheme that funneled billions of dollars of Saudi Arabian petrol dollars back into the U.S. economy, and that further cemented the intimate relationship between the House of Saud and successive U.S. administrations. Explain.

JP: Yes, it was a fascinating time. I remember well, you’re probably too young to remember, but I remember well in the early seventies how OPEC exercised this power it had, and cut back on oil supplies. We had cars lined up at gas stations. The country was afraid that it was facing another 1929-type of crash—depression; and this was unacceptable. So, they—the Treasury Department hired me and a few other economic hit men. We went to Saudi Arabia. We—

AG: You’re actually called economic hit men—e.h.m.’s?

JP: Yeah, it was a tongue-in-cheek term that we called ourselves. Officially, I was a chief economist. We called ourselves e.h.m.’s. It was tongue-in-cheek. It was like, nobody will believe us if we say this, you know? And, so, we went to Saudi Arabia in the early seventies. We knew Saudi Arabia was the key to dropping our dependency, or to controlling the situation. And we worked out this deal whereby the Royal House of Saud agreed to send most of their petro-dollars back to the United States and invest them in U.S. government securities. [*See Phoenix Journals, Journal #3, Space-Gate, the Veil Removed, page 78, “The ‘Grey Men’ Tape” for further details.*] The Treasury Department would use the interest from these securities to hire U.S. companies to build Saudi Arabia—new cities, new infrastructure—which we’ve done. And the House of Saud would agree to maintain the price of oil within acceptable limits to us, which they’ve done all of these years, and we would agree to keep the House of Saud in power as long as they did this, which we’ve done, which is one of the reasons we went to war with Iraq in the first place. And in Iraq we tried to implement the same policy that was so successful in Saudi Arabia, but Saddam Hussein didn’t buy. When the economic hit men fail in this scenario, the next step is what we call the jackals. Jackals are C.I.A.-sanctioned people that come in and try to foment a coup or revolution. If that doesn’t work, they perform assassinations, or try to. In the case of Iraq, they weren’t able to get through to Saddam Hussein. He had—his bodyguards were too good. He had doubles. They couldn’t get through to him. So the third line of defense, if the economic hit men and the jackals fail, the next line of defense is our young men and women, who are sent in to die and kill, which is what we’ve obviously done in Iraq.

AG: Can you explain how Torrijos died?

JP: Omar Torrijos, the President of Panama. Omar Torrijos had signed the *Canal Treaty* with

Carter much—and, you know, it passed our congress by only one vote. It was a highly contended issue. And Torrijos then also went ahead and negotiated with the Japanese to build a sea-level canal. The Japanese wanted to finance and construct a sea-level canal in Panama. Torrijos talked to them about this which very much upset Bechtel Corporation, whose president was George Schultz and senior council was Casper Weinberger. When Carter was thrown out (and that's an interesting story—how that actually happened), when he lost the election, and Reagan came in and Schultz came in as Secretary of State from Bechtel, and Weinberger came from Bechtel to be Secretary of Defense, they were extremely angry at Torrijos—tried to get him to renegotiate the *Canal Treaty* and not to talk to the Japanese. He adamantly refused. He was a very principled man. He had his problem, but he was a very principled man. He was an amazing man, Torrijos. And so, he died in a fiery airplane crash, which was connected to a tape recorder with explosives in it, which—I was there. I had been working with him. I knew that we economic hit men had failed. I knew the jackals were closing in on him, and the next thing, his plane exploded with a tape recorder with a bomb in it. There's no question in my mind that it was C.I.A. sanctioned, and most—many Latin American investigators have come to the same conclusion. Of course, we never heard about that in our country.

AG: So, where—when did your change your heart happen?

JP: I felt guilty throughout the whole time, but I was seduced. The power of these drugs, sex, power, and money, was extremely strong for me. And, of course, I was doing things I was being patted on the back for. I was chief economist. I was doing things that Robert McNamara liked and so on.

AG: How closely did you work with the World Bank?

JP: Very, very closely with the World Bank. The World Bank provides most of the money that's used by economic hit men, it and the I.M.F. But when 9/11 struck, I had a change of heart. I knew the story had to be told because what happened at 9/11 is a direct result of what the economic hit men are doing. And the only way that we're going to feel secure in this country again and that we're going to feel good about ourselves is if we use these systems we've put into place to create positive change around the world. I really believe we can do that. I believe the World Bank and other institutions can be turned around and do what they were originally intended to do, which is help reconstruct devastated parts of the world. Help—genuinely help poor people. There are twenty-four thousand people starving to death every day. We can change that.

AG: John Perkins, I want to thank you very much for being with us. John Perkins' book is called, *Confessions of an Economic Hit Man*.

[END QUOTING]

Once again, we thank DemocracyNow.org for permission to reprint this highly revealing interview with John Perkins. The following endorsements of Mr. Perkins' book have been drawn from the Berrett-Koehler website <[www.bkconnection.com](http://www.bkconnection.com)>.

#### ENDORSEMENTS

“As a senior economist in several development agencies and a lead economist at the World Bank over the past decade, I find John Perkins's book provocative and disturbing. With honesty, remorse and compassion, Perkins describes the motivation of

‘economic hit men’ (EHM) and the corporations they serve as being far more prevalent than many of us would like to believe. Moreover, Perkins makes a good case that most of us help further the agenda of EHM and such corporations by unknowingly and unwittingly doing their bidding, failing to appreciate the sinister architecture behind the global empire. The book succeeds as a wake up call because the reader cannot help but assess his or her role on a personal level, thus providing an impetus for change.”—R. Paul Shaw, Formerly Lead Economist, Currently Program Adviser, Human Development Group, World Bank Institute

“*Confessions of an Economic Hit Man* is a brave and potent book written by a man whose commitment to the truth transcends any personal concerns about revealing his own previous blindness. Perkins reveals, bears witness, lifts the veil, and talks straight about what he personally has seen and knows intimately as the dark damage that has been done and continues to be done in the name of economic development and progress. This is a stunning and groundbreaking book that is a must-read for anyone who cares about our world.”—Lynne Twist, global activist and author of *The Soul of Money*

“John Perkins has broken the pact of L'Omerta—the infamous code of silence in the old-style Mafia that was enforced by assassination—to reveal the inner workings of corporate empire. Written like the best crime novel, the book is a page-turner that shows the real menace of organized crime being run out of ritzy boardrooms and seedy dictatorships, using ‘economic hit men’ who are the murderous technicians of corporate crime as a way of doing business. A brave and timely book not to be missed.”—Kenny Ausubel, Founder and President, Bioneers, author of *Seeds of Change* and *When Healing Becomes a Crime*, award-winning film-maker of *Hoxsey: How Healing Becomes a Crime*

“John Perkins has written a book that shakes one's confidence in the ethics of the prevailing economic system. We are in troubling times and need to understand realistically the price we are paying for the ‘free’ market we enjoy. Perkins has written an extraordinary tale.”—Jim Garrison, author of *America As Empire*, President of the State of the World Forum

“*Confessions of an Economic Hit Man* is a fascinating insider's view of how private multinational companies legally rob the poor of the third world, country after country. His overview of Panama is particularly edifying. As Anarchasis said 2500 years ago ‘Laws are like spider webs. They trap the poor and defenseless and the rich and powerful tear them apart.’”—Josh Mailman, Cofounder, The Threshold Foundation, Social Venture Network, and Business for Social Responsibility; entrepreneur, businessman, activist/philanthropist

“*Confessions of an Economic Hit Man* is a unique book, brave because it is personal. With unflinching honesty, John Perkins narrates his moral awakening and struggle to break free from the corrupt system of global domination he himself helped to create. This book possesses an immediacy that separates it from the numerous studies we already have of American Empire. It comes from the heart. I highly recommend it.”—Michael Brownstein, author of *World on Fire*

“John Perkins has told a thrilling story. But what makes it even more relevant is that his tale is the true account of a deeply dedicated and courageous man who exposes information that is crucial for the survival of many people in the world. I couldn't put it down and now want all my friends to read it. Read this book!”—Stephan Rechtschaffen, M.D., cofounder, CEO, Omega Institute and author of *Timeshifting: Creating More Time to Enjoy Your Life*

“John Perkins speaks for many of us—citizens in our country, citizens of the world—who are trapped in our own personal and national histories, who struggle with temptation, power and ultimately our own souls. *Confessions of an Economic Hit Man* is his story, one that through necessity and courage offers us a way back, beyond salvation, to human justice.”—Gary Margolis Ph.D., Director, Center for Counseling and Human Relations, Associate Professor of English, Middlebury College and author of *Fire in the Orchard* and *Falling Awake*

[END QUOTING]

To encourage readers to acquire a copy of this book, we next include an excerpt of the “Prologue”.

[QUOTING:]

#### PROLOGUE

Quito, Ecuador's capital, stretches across a volcanic valley high in the Andes, at an altitude of nine thousand feet. Residents of this city, which was founded long before Columbus arrived in the Americas, are accustomed to seeing snow on the surrounding peaks, despite the fact that they live just a few miles south of the equator. The city of Shell, a frontier outpost and military base hacked out of Ecuador's Amazon jungle to service the oil company whose name it bears, is nearly eight thousand feet lower than Quito. A steaming city, it is inhabited mostly by soldiers, oil workers, and the indigenous people from the Shuar and Kichwa tribes who work for them as prostitutes and laborers.

To journey from one city to the other, you must travel a road that is both tortuous and breathtaking. Local people will tell you that during the trip you experience all four seasons in a single day. Although I have driven this road many times, I never tire of the spectacular scenery. Sheer cliffs, punctuated by cascading waterfalls and brilliant bromeliads, rise up one side. On the other side, the earth drops abruptly into a deep abyss where the Pastaza River, a headwater of the Amazon, snakes its way down the Andes. The Pastaza carries water from the glaciers of Cotopaxi, one of the world's highest active volcanoes and a deity in the time of the Incas, to the Atlantic Ocean over three thousand miles away.

In 2003, I departed Quito in a Subaru Outback and headed for Shell on a mission that was like no other I had ever accepted. I was hoping to end a war I had helped create. As is the case with so many things we EHMs must take responsibility for, it is a war that is virtually unknown anywhere outside the country where it is fought. I was on my way to meet with the Shuars, the Kichwas, and their neighbors the Achuars, the Zaparos, and the Shiwiars tribes determined to prevent our oil companies from destroying their homes, families, and lands, even if it means they must die in the process. For them, this is a war about the survival of their children and cultures, while for us it is about power, money, and natural resources. It is one part of the struggle for world domination and the dream of a few greedy men, global empire.

That is what we EHMs do best: we build a global empire. We are an elite group of men and women who utilize international financial organizations to foment conditions that make other nations subservient to the corporatocracy running our biggest corporations, our government, and our banks. Like our counterparts in the Mafia, EHMs provide favors. These take the form of loans to develop infrastructure: electric generating plants, highways, ports, airports, or industrial parks. A condition of such loans is that engineering and construction companies from our own country must build all these projects. In essence, most of the

money never leaves the United States; it is simply transferred from banking offices in Washington to engineering offices in New York, Houston, or San Francisco.

Despite the fact that the money is returned almost immediately to corporations that are members of the corporatocracy (the creditor), the recipient country is required to pay it all back, principal plus interest. If an EHM is completely successful, the loans are so large that the debtor is forced to default on its payments after a few years. When this happens, then like the Mafia we demand our pound of flesh. This often includes one or more of the following: control over United Nations votes, the installation of military bases, or access to precious resources such as oil or the Panama Canal. *[This should make it crystal clear as to why Senator Kerry described the so-called "Coalition of the Willing" as a "Coalition of the Bought and Paid for".]* Of course, the debtor still owes us the money and another country is added to our global empire.

Driving from Quito toward Shell on this sunny day in 2003, I thought back thirty-five years to the first time I arrived in this part of the world. I had read that although Ecuador is only about the size of Nevada, it has more than thirty active volcanoes, over 15 percent of the world's bird species, and thousands of as-yet-unclassified plants, and that it is a land of diverse cultures where nearly as many people speak ancient indigenous languages as speak Spanish. I found it fascinating and certainly exotic; yet, the words that kept coming to mind back then were pure, untouched, and innocent. Much has changed in thirty-five years.

At the time of my first visit in 1968, Texaco had only just discovered petroleum in Ecuador's Amazon region. Today, oil accounts for nearly half the country's exports. A trans-Andean pipeline built shortly after my first visit has since leaked over a half million barrels of oil into the fragile rain forest—more than twice the amount spilled by the Exxon Valdez. Today, a new \$1.3 billion, three hundred-mile pipeline constructed by an EHM-organized consortium promises to make Ecuador one of the world's top ten suppliers of oil to the United States. Vast areas of rain forest have fallen, macaws and jaguars have all but vanished, three Ecuadorian indigenous cultures have been driven to the verge of collapse, and pristine rivers have been transformed into flaming cesspools.

During this same period, the indigenous cultures began fighting back. For instance, on May 7, 2003, a group of American lawyers representing more than thirty thousand indigenous Ecuadorian people filed a \$1 billion lawsuit against ChevronTexaco Corp. The suit asserts that between 1971 and 1992 the oil giant dumped into open holes and rivers over four million gallons per day of toxic wastewater contaminated with oil, heavy metals, and carcinogens, and that the company left behind nearly 350 uncovered waste pits that continue to kill both people and animals.

Outside the window of my Outback, great clouds of mist rolled in from the forests and up the Pastaza's canyons. Sweat soaked my shirt, and my stomach began to churn, but not just from the intense tropical heat and the serpentine twists in the road. Knowing the part I had played in destroying this beautiful country was once again taking its toll. Because of my fellow EHMs and me, Ecuador is in far worse shape today than she was before we introduced her to the miracles of modern economics, banking, and engineering. Since 1970, during this period known euphemistically as the Oil Boom, the official poverty level grew from 50 to 70 percent, under- or unemployment increased from 15 to 70 percent, and public debt increased from \$240 million to \$16 billion. Meanwhile, the share of national resources allocated to the poorest segments of the

population declined from 20 to 6 percent.

Unfortunately, Ecuador is not the exception. Nearly every country we EHMs have brought under the global empire's umbrella has suffered a similar fate. Third World debt has grown to more than \$2.5 trillion, and the cost of servicing it over \$375 billion per year as of 2004 is more than all Third World spending on health and education, and twenty times what developing countries receive annually in foreign aid. Over half the people in the world survive on less than two dollars per day, which is roughly the same amount they received in the early 1970s. Meanwhile, the top 1 percent of Third World households accounts for 70 to 90 percent of all private financial wealth and real estate ownership in their country; the actual percentage depends on the specific country.

The Subaru slowed as it meandered through the streets of the beautiful resort town of Baños, famous for the hot baths created by underground volcanic rivers that flow from the highly active Mount Tungurahua. Children ran along beside us, waving and trying to sell us gum and cookies. Then we left Baños behind. The spectacular scenery ended abruptly as the Subaru sped out of paradise and into a modern vision of Dante's Inferno. A gigantic monster reared up from the river, a mammoth gray wall. Its dripping concrete was totally out of place, completely unnatural and incompatible with the landscape. Of course, seeing it there should not have surprised me. I knew all along that it would be waiting in ambush. I had encountered it many times before and in the past had praised it as a symbol of EHM accomplishments. Even so, it made my skin crawl.

That hideous, incongruous wall is a dam that blocks the rushing Pastaza River, diverts its waters through huge tunnels bored into the mountain, and converts the energy to electricity. This is the 156-megawatt Agoyan hydroelectric project. It fuels the industries that make a handful of Ecuadorian families wealthy, and it has been the source of untold suffering for the farmers and indigenous people who live along the river. This hydroelectric plant is just one of many projects developed through my efforts and those of other EHMs. Such projects are the reason Ecuador is now a member of the global empire, and the reason why the Shuars and Kichwas and their neighbors threaten war against our oil companies.

Because of EHM projects, Ecuador is awash in foreign debt and must devote an inordinate share of its national budget to paying this off, instead of using its capital to help the millions of its citizens officially classified as dangerously impoverished. The only way Ecuador can buy down its foreign obligations is by selling its rain forests to the oil companies. Indeed, one of the reasons the EHMs set their sights on Ecuador in the first place was because the sea of oil beneath its Amazon region is believed to rival the oil fields of the Middle East. The global empire demands its pound of flesh in the form of oil concessions.

These demands became especially urgent after September 11, 2001, when Washington feared that Middle Eastern supplies might cease. On top of that, Venezuela, our third-largest oil supplier, had recently elected a populist president, Hugo Chavez, who took a strong stand against what he referred to as U.S. Imperialism; he threatened to cut off oil sales to the United States. The EHMs had failed in Iraq and Venezuela, but we had succeeded in Ecuador; now we would milk it for all it is worth.

Ecuador is typical of countries around the world that EHMs have brought into the economic-political fold. For every \$100 of crude taken out of the Ecuadorian rain forests, the oil companies receive \$75. Of the remaining \$25, three-quarters must go to paying off the foreign debt. Most of the remainder covers

military and other government expenses which leaves about \$2.50 for health, education, and programs aimed at helping the poor. Thus, out of every \$100 worth of oil torn from the Amazon, less than \$3 goes to the people who need the money most, those whose lives have been so adversely impacted by the dams, the drilling, and the pipelines, and who are dying from lack of edible food and potable water.

All of those people, millions in Ecuador, billions around the planet, are potential terrorists. Not because they believe in communism or anarchism or are intrinsically evil, but simply because they are desperate. Looking at this dam, I wondered as I have so often in so many places around the world when these people would take action, like the Americans against England in the 1770s or Latin Americans against Spain in the early 1800s.

The subtlety of this modern empire building puts the Roman centurions, the Spanish conquistadors, and the eighteenth- and nineteenth-century European colonial powers to shame. We EHMs are crafty; we learned from history. Today we do not carry swords. We do not wear armor or clothes that set us apart. In countries like Ecuador, Nigeria, and Indonesia, we dress like local schoolteachers and shop owners. In Washington and Paris, we look like government bureaucrats and bankers. We appear humble, normal. We visit project sites and stroll through impoverished villages. We profess altruism, talk with local papers about the wonderful humanitarian things we are doing. We cover the conference tables of government committees with our spreadsheets and financial projections, and we lecture at the Harvard Business School about the miracles of macroeconomics. We are on the record, in the open. Or so we portray ourselves and so are we accepted. It is how the system works. We seldom resort to anything illegal because the system itself is built on subterfuge, and the system is by definition legitimate.

However, and this is a very large caveat, if we fail, an even more sinister breed steps in, ones we EHMs refer to as the jackals, men who trace their heritage directly to those earlier empires. The jackals are always there, lurking in the shadows. When they emerge, heads of state are overthrown or die in violent "accidents". And if by chance the jackals fail, as they failed in Afghanistan and Iraq, then the old models resurface. When the jackals fail, young Americans are sent in to kill and to die.

As I passed the monster, that hulking mammoth wall of gray concrete rising from the river, I was very conscious of the sweat that soaked my clothes and of the tightening in my intestines. I headed on down into the jungle to meet with the indigenous people who are determined to fight to the last man in order to stop this empire I helped create, and I was overwhelmed with feelings of guilt. How, I asked myself, did a nice kid from rural New Hampshire ever get into such a dirty business?

*[END QUOTING]*

*If the whole world is to be a democracy, it must be asked: What percentage of the world's citizens do you think would vote for maintaining this kind of a status quo? Isn't it about time we took our world back from the tiny handful of greedy elite controllers and did our utmost to ensure such insidiously evil control mechanisms are not—EVER again—put in place? God has provided the way. Who will use it remains to be seen.*

*You should soon be able to obtain copies of this book through our usual recommended suppliers: Phoenix Source Distributors (1-800-800-5565) for U.S. orders or Phoenix Source Canada (1-250-248-5591) for International orders. This book is a "must have" for your home library.*

# Of UFOs, Israeli Nukes And Economic Crises

11/8/04—#1 (18-84)

MON., Nov. 8, 2004 9:37 A.M. YR 18, DAY 84  
Manila, Philippines

RE: IMPORTANT UFO ATTENTION; NUCLEAR  
MESS IN ISRAEL—AGAIN; ECONOMIC CRISIS  
FACING NEW PRESIDENT(S) [EVERYWHERE]  
—GCH/D

## AGAIN AND AGAIN: ARE THERE “REALLY” UFOs?

### **This CANNOT be “THE” question!**

Of course there are so many UFOs as to stagger even the thinking mind. ANYTHING unidentified in the sky from craft to a chicken hawk can be unidentified, incorrectly identified or currently unrecognized terrestrially manufactured “objects”.

Are there truly UFOs of the extra-terrestrial (alien operated) kind? Again, OF COURSE! How arrogant of you terrestrials of “Earth Shan” to even consider yourselves so utterly important as to be the ONLY evolved species around. You are, actually, just about the most UNEVOLVED species around.

Spiritually you are, as defined rather carelessly, Barbarians of the worst ilk. Moreover, you feast on bloodletting, “End” times, BS religions and no, you DO NOT WANT TRUTH—you want scoops and titillation.

Has it ever occurred to YOU that YOU ARE NOT IN THE “END TIMES”?

### YOU ARE IN THE “BEGINNING TIMES”!!!

Get it “right”, readers and friends, and we can get on with our job of clearing and re-claiming some remnant of this wondrous creation called Earth planet. I want all of you, likewise, arrogant English-speaking persons to remember that “Earth” is nothing other than a reference to a “terrestrial” item as “terra” (earth substance) as recognized by composition of the very manifest “thing” called “matter”.

I will go further in the “discussion” and repeat for the umpteenth time that there is no actual translation or interpretation of “John’s REVELATION”—except by John who had the revelation. All the rest is guess and pompous interpretation. We now have added a thousandth interpreter-receiver getting a breakdown of John’s revelations (DREAM—as in singularly ONE dream) as now interpreted and supposedly showered down to you by “Jesus THE Christ”. Jesus is in itself an incorrect name even for the one you are taught fits the description. When will YOU stop feeding on all the nonsense put forth for your distractions?

If I say that “Man, this is a cool but far-out gospel....”, I ask you how that is going to read 2,000 years from now, in Swahili?

When you outgrow this “Spirit do it all FOR me” attitude, we might well make incredible strides into KNOWING and evolvment.

If you consider that our presentations are out-of-sight then I suggest you get READING glasses and re-read the Bearden material. You might just have a different attitude about UFOs as well.

Now, next: Why do you think this UFO stuff will center itself around the United States of America

whereat almost all of the controlling entities who work AGAINST truth and righteousness dwell in their ivory towers?

You are IN THE BEGINNING (Go back and read our masthead) and obviously, if we are involved—it certainly concludes that the U.S. is NOT the PRIMARY lift-off spot. Think about it and conclude that which you will regarding your own position. Run away, turn away, drop away—do whatever you will “away” but your attitude will not change one iota of the facts or truth about what and WHO is “comin’ down”.

At this point of your evolvment it is a fact that if you go up—you WILL come down. If you are thrust “out”, you will be drawn “back”. That is the human experience and except in death of the body, at this time, ascending as physical capability on a general scale is not an option.

Can you be “transported” elsewhere? YES INDEED but NOT by your own doing, and most certainly not without change of ASPECT and rearrangement of everything from keeping blood from clotting and frequencies from being so hyper-energized as to kill you anyway. Moreover, WHAT WILL YOU EAT FOR FUEL FOR THAT POD CALLED BODY?

Yes WE have thought of these intriguing realities and HAVE PREPARED FOR THOSE CONTINGENCIES—IN YOUR BEHALF. BUT, as crass and basic as it may hit you—we really are not allowed nor is it desired to shift all of your evil human intentions into the environments containing humanoid beings. I AM NOT THE FINAL WORD, GOOD READERS.

I suggest you consider your “WHAT IS” circumstance because you are NOT going to have RAPTURES in some manner of your “forgiven or self-assumed ‘salvation’”. I have already written on these topics so I suggest you do some homework. We have full “rescue” capability BUT YOU ARE PRETTY MUCH STUCK WITH YOUR OWN ATTITUDES AND CIRCUMSTANCES—AND WITH A WORLD AS YOU HAVE BROUGHT IT INTO BEING AND/OR DESTRUCTION.

THE EARTH WAS GIVEN INTO YOUR HANDS—NOT MINE! GOD HAS PROVIDED US WITH THE “WAY” TO GET OUR LITTLE PORTION WORKING QUITE WELL—BUT NOT “FOR” YOU—RATHER, perhaps, WITH you.

Am I just being hard or difficult? No, I share what IS—not that which titillates your “would rather” buttons.

I will ask that you pay close attention to that which I am asking be shared regarding China and India’s “SPACE” programs and recalculate where expectations of better landing sites than downtown New York might well be here in this “beginning phase” in which YOU ARE.

I have no input into what you wish to believe, have believed, might believe, believe possibly if proven or what you might care to believe. Your “believing” is not my business. My mandate accepted was to give YOU enough provided TRUTH as to how it IS to meet your needs. I did it and now continue to

share along with pursuing the WAY as given unto us. Twisting arms is not among my permits for operation. I am continually amused at the numbers of people who continue to negate my very presence and then continue to demand input/output FROM me. If I have no trek with you or position of even respect, why oh why do YOU continue the kibitz for THE TRUTH is not going to change and neither am I going to simply give you what you WANT to hear or have already decided to believe.

Yes, I am one of “those” cosmic extra-terrestrials—BUT SO IS GOD, good buddies, SO IS GOD!

Are “my friends and colleagues” impatient and pretty much “out of patience” with you? Indeed, indeed! You remain at a critical level of playing in your own poop, chelas. You have evolved into killers rather than creators. Is it TOO LATE? Perish that thought, pilgrim, for “too late” HAS NO MEANING WHATSOEVER!

I ask that the information requested and received be inserted here and without further comment from me—you are quite capable of being discerning and doing some of your own HOMEWORK and please, continue to be appreciative of John Ray who continues to bring some of the more applicable items to our attention. He is truly missed at the Newsdesk and especially as we are buried under such a load of work and debris as to be unable to address it all as in item by item.

I would note one question which comes from the articles offered: Why those areas? I think it would be quite obvious that contacts and interchange are going to take place where most secure, capable of enabling the research necessary in the event of integration and frankly, where there is less confusion, population and “attack mode” stupidity. Your individual arrogance is surely your downfall in almost all possible intrigues. How long do you think a UFO landing in Central Park or Gorby Park would be possible? YOU DON’T HAVE THE PROPER TECHNOLOGY MANDATED AND THEREFORE OURS MUST BE THE ONES OF CHOICE. THAT MEANS REALITY CHECKS ANY WAY YOU CHOOSE TO CONSIDER ALTERNATIVES.

## WHY ARE INDIAN SPACE RESEARCH ORGANIZATION (ISRO) AND CHINA NATIONAL SPACE ADMINISTRATION (CNSA) TIGHT LIPPED ABOUT RECENT ENCOUNTERS WITH UFOS?

IndiaDaily.com, 11/1/04

By Prem Hazarika

Indian sky has been the scene of numerous UFOs in recent days. According to some of the Indian Space Research Organization officials who are officially tight lipped there are lots of excitement about this topic. Many are hinting that in 2012 there will be an official landing in six different countries all over the world. India is one of the six chosen. The UFOs are mainly performing scouting missions to establish contacts with Indian Government and military. India is being told on how to tackle the nuclear, space technology and other advanced technologies.

India is definitely going to gain from these recent encounters. One of the ISRO engineers recently spoke about India’s most advanced secret project on anti-gravity propulsion systems and the fact that some scientists are in the process of studying this advanced technology in a package form. When asked what he really meant by “package” form, his reply was readymade technologies made easy for absorption and

utilization instead of invention.

In addition, Indian Air Force personnel also indicated some interesting projects in Hindustan Aeronautics Limited, India's premiere organization for avionic research, development and production. Three of them were interesting on anti-gravity propulsion and making crafts weightless. The stealth technology project was also interesting—the mechanism of making flying objects invisible real time.

It is true that ISRO engineers and technicians were in different location of Himalayas and they are still doing something near India China borders. It does not make sense that they are preparing a spacecraft-launching site in Haimalayas. Then why are they so eager to position themselves in Himalayas?

Interestingly Chinese Space Organization—CNSA (China National Space Administration) has also undertaken similar activities on the other side of Himalayas. Sources say they have undertaken similar projects. And China is also one of the six nations where such landings will take place in 2012.

For some reason, like USA and Russia (back then Soviet Union) China is also backtracking on manned lunar exploration! In Beijing, among some Government inner circles, there is a profound rumor that China is being “told” to abandon any manned space journey above 100 miles from earth till 2012.

\* \* \*

#### LET'S TALK “FLU”

I asked that the historical article OFFERED LAST PAPER regarding the first realization of “Flu” viruses wiping out a swath of mankind on such a massive scale as to be shocking, even today, and where it was admitted there was/is no cure for many of your more virulent forms of disease-causing organisms. “Flu” is back with a vengeance, people, and those “shots” aren't going to be a drop in any bucket of cure if this plague gets out of control.

I hope that you readers immediately thought: COLLOIDS! What happens next is up to the controlling manipulators. It makes John's revelations quite non-spectacular in perspective.

I have some even worse news for you who, especially, think you have to have a “brew” or two—these viruses now come in a form that literally feed off the alcohol in the medications themselves and actually convert the toxins to skull-and-bones poison.

If you begin to feel “Iffy” and think a “hot toddy” might just help—STOP! A nice hot cup of tea with cinnamon-honey and lemon juice is GOOD. Leave out the “toddy”.

Yes I know: “Well, life just isn't worth living if we have to .....

So, what's the problem for if it isn't worth living then what difference could it possibly make? I would ask a harder “same, same but different”: Is what you are doing REALLY “living”? I wouldn't have thought a “brew” could possibly be worth one brain cell but I find that apparently it is far more important than having water instead. It appears that some of you who already are so slow in processing thoughts have failed to realize the very attack on yourself through abuse and use of wrong things.

Alzheimer's? Come on, people, much of it is a full deterioration of a nervous networking system gone defunct through something as casual as alcohol use. That “shot” in the old cup of coffee is indeed ENOUGH. Alcohol is debilitating and ultimately

DEADLY. I suggest you not even swallow mouthwash. Germs is not all that alcohol kills, my “not me” friends.

If you missed the article to which I refer—please feel free to go back and take a better look. [See November 3, 2004 issue, *World News Insights*, page 14: “RUSSIAN EXPERT SAYS FLU EPIDEMIC MAY KILL OVER ONE BILLION THIS YEAR”.]

\* \* \*

#### CONTINUING DEBATE ABOUT ISRAEL'S NUCLEAR OPTIONS

I am also quite weary of repeating and repeating the warnings about Israel and nuclear holdings. Israel has been nuclear ready FOR WAR USE since the very early 1960s. This is not new news. Moreover, they have stored YOUR GOLD in the same “reserve compound” with those WMDs to protect the assets. It has been an ongoing coalition effort to collect the gold in order to gain control through the number ONE protocol of those elder elders.

I do think it worthy of notice to run the article about the U.S. knowing about those nuclear options all the way back into the '60s. Please just copy it into this writing here:

\* \* \* \*

<<http://www.haaretz.com/hasen/spages/497841.html>>

#### A BLAST FROM THE PAST

*Haaretz*, 11/5/04

By Amnon Barzilai

What did the U.S. know in the 1960s about Israel's nuclear option? Apparently, the U.S. knew everything: Within six to eight years Israel would conduct its first test and by 1975 it would have an appropriate nuclear force, as a new study reveals.

In late October, 1964, Israel's prime minister, Levi Eshkol, sent a message to the president of the United States, Lyndon Johnson. The message included “a very personal and informal” request to postpone the next visit of American government officials to the nuclear reactor in Dimona. Eshkol asked to postpone the visit until after the Knesset elections in November, 1965.

This request is one expression of the dispute that had already begun over the development of the Israeli nuclear project. One aspect of the dispute was the pressure exerted by the U.S. to halt the project or to ensure American supervision over it. Another aspect, an internal one, peaked in a harsh disagreement between Eshkol and David Ben-Gurion, who had resigned from the position of prime minister a year and a half earlier. Eshkol admitted that he had committed to “seasonal supervision” of the reactor in Dimona, but he feared that if he were compelled to fulfill this commitment, he would come under fierce criticism by Ben-Gurion and the others who had bolted Mapai to form the Rafi faction in the Knesset. Eshkol explained to U.S. administration officials that Rafi's accusations against him would be liable to hurt his political standing.

Eshkol's message to Johnson appears in a U.S. State Department memorandum discovered by Dr. Zaki Shalom, a senior researcher at Ben-Gurion University. Shalom is currently publishing a study entitled “From Dimona to Washington” about the relationship between Israel and the U.S. during the years 1960 through 1968, concerning the construction

of the nuclear reactor in Dimona.

“Eshkol's unusual request sent to the White House is also one of the keys to the understandings that ultimately developed between the U.S. and Israel with regard to continuation of the nuclear project,” Shalom says.

In 1963, John F. Kennedy had already dropped his intention of squashing the Israeli nuclear plan and adopted a policy of keeping a low profile. This change, Shalom believes, was part of an attempt to stabilize Eshkol's leadership at any cost. The American administration's assessment was that it would be easier to discuss the nuclear issue with Eshkol than with Ben-Gurion.

On the eve of the Israeli elections in November, 1965, Shalom says, “Eshkol persuaded the Americans that a blow to his political standing would bring Ben-Gurion back to power. And there was nothing the American administration wanted less than to see Ben-Gurion return as prime minister.”

Shalom's study of the argument between Jerusalem and Washington over the development of Israel's nuclear capability is based entirely on documents from official archives in the United States, England and Canada. The documents clearly indicate that in 1963 the American administration had a precise timetable on the Israeli nuclear program: Within six to eight years Israel would conduct its first nuclear test and within 10 to 12 years—that is, 1973 to 1975—Israel would have an appropriate nuclear force.

In order to ensure the capability of independent launches, Israel also began to develop - with the assistance of the French firm Marcel Dassault—a two-stage, ground-to-ground Jericho missile, fueled by solid propellant, with a range of about 500 kilometers and capable of carrying nuclear warheads. The missiles developed in Israel were similar to the American Pershing missiles. Based on information the American intelligence branches had in 1963 and on memoranda the State Department sent to President Kennedy, it appears that Israel decided to produce between 200 and 300 missiles at a cost of \$700,000 per missile.

Shalom focuses on the enormous interest two Democratic presidents in the 1960s—Kennedy and Johnson—showed in the Israeli nuclear initiative. The book examines their activities regarding this issue and the pressure they exerted to ensure that the reactor in Dimona would be under close supervision. Israel had a ready answer to explain why it was building a nuclear reactor—it was ostensibly intended to develop energy for water desalination. But when questions were asked about missile development, Israel stuttered and stammered.

Robert Komer, who briefly served as Johnson's national security advisor in 1966, asked during a discussion with the American president, “Why does Israel need to spend hundreds of millions of dollars on a project that has little [deterrent] benefit [as long as it carries only conventional warheads]?” One can understand from this question that the U.S. believed the missiles were intended to carry nuclear warheads. Myer “Mike” Feldman, a presidential advisor from 1961 to 1965, pressed Eshkol to inform the U.S. how many missiles Israel planned to produce. The memorandum in the State Department archives reveals that the Israeli prime minister responded to Feldman's prodding in the style of a Jewish shopkeeper: “Perhaps five less, or more than 25, perhaps 10, 20 or 30.”

### Questions of ambiguity

Some 40 years later, Israel is still concealing all information about its nuclear capabilities, but an unforeseen breach has been exposed. Though access to relevant archive documents is still blocked in Israel, the U.S. is ignoring Israel's sensitivity regarding the nuclear issue.

When Shalom began his research about four years ago, some of the documents dealing with foreign relations from 1963 to 1967 were declassified in the presidential archives of Kennedy and Johnson and in the national archives of the U.S., Britain and Canada. Thus, a considerable amount of material surfaced that documents conversations between U.S. administration officials and Israeli government leaders about the U.S. demand to halt the development of Israel's nuclear capacity and allow full American supervision over the activities at the nuclear facility in Dimona. These documents, now accessible to the general public, document the most intimate conversations about the Israeli nuclear program and raise questions about Israel's continued policy of ambiguity and vagueness regarding its nuclear status.

Shalom's study reveals that the U.S., Britain and Canada established a joint mechanism in Israel, through their embassies, to collect information on the Israeli nuclear program. The ambassadors and military attaches exchanged and compared information about the Israeli program and sent reports back to their governments. The government of Israel also used this mechanism, exploiting it to send messages, sometimes as "trial balloons".

In February, 1961, the British ambassador in Israel raised a series of questions about the Dimona project. The questions were passed on to Ben-Gurion, who responded in a detailed letter that Israel harbored no intention of producing nuclear arms. Nonetheless, he emphasized that Israel was surrounded by hostile countries and that it would be difficult to assess the future.

According to Shalom, "In these words, Ben-Gurion officially raised the nuclear option as a possibility that Israel might choose if certain changes take place in the diplomatic and strategic reality in which it operates." Shalom says that Ben-Gurion "had no doubt that this clarification would also be passed along to the American administration. Nonetheless, it was comfortable for him at that stage to gauge the anticipated response via the British government, without risking a direct confrontation with the American administration."

Shalom discovered the clarifications Ben-Gurion sent to the British ambassador in a report written by the Canadian ambassador to Israel; he found this report in the archives of Canada's Department of Foreign Affairs and International Trade. Ben-Gurion had already used this same tactic in a meeting with Canada's prime minister, John Diefenbaker, the day before meeting with President Kennedy on May 30, 1960. Ben-Gurion told Diefenbaker that Israel was likely to build an experimental facility that would produce a limited quantity of plutonium each year. This was a clear hint that Israel planned to build the capacity for producing nuclear weaponry.

"But," Shalom notes, "Diefenbaker did not fall off his chair when he heard this, so Ben-Gurion could assume that his meeting with President Kennedy would also be conducted in relative calm."

### No quick grab

The documents also indicate that the warnings Ben-Gurion sounded in his talks with U.S. government officials about Israel's susceptibility to sudden attack and destruction by Arab states eventually fell upon attentive ears (though after he was no longer prime minister). The U.S. government ultimately enabled Israel to develop the nuclear option. One of Shalom's conclusions is that this nuclear development was not the result of a quick grab by two or three Israeli prime ministers. He presents the surprising conclusion that, due to U.S. pressure on Israel, the decision-making process regarding the development of nuclear capability was more open and democratic in Israel than in any other country in the world.

The United States developed its nuclear weapons in the secret Manhattan Project, and the citizens of the U.S. and the world learned of the American nuclear project only after the bombings of Hiroshima and Nagasaki. In Israel, on the other hand, there was intense public debate throughout the 1960s and 1970s, Shalom notes. The argument over the logic of developing a nuclear capability took place within the ruling party—Yigal Allon and Yisrael Galili were prominent opponents—and in the academic world, and was widely reported in the press.

Many publications have appeared in Israel and the world about the development of the Israeli nuclear facility. In March 1965, the *New York Times* reported that representatives of the U.S. administration visited the Dimona reactor. This published report aroused a storm in Israel. The Rafi faction, led by Ben-Gurion, accused Eshkol of capitulating to American pressure. Eshkol's associates complained that the American administration was responsible for leaking news of the Dimona visit to the media. In their view, it proved that Israel could not place complete faith in the administration's ability to be a full partner on such a secret and sensitive issue as the nuclear project.

### Israel the poker player

Dr. Zaki Shalom's study appears four years after the Hebrew publication of the controversial book by Dr. Avner Cohen, *Israel and the Bomb*, which deals with the development of Israel's nuclear capability. Cohen's book was delayed for a long time due to arguments raised by Yehiel Horev, the Defense Ministry's director of security. Horev claimed that the book includes information that could harm Israel's security.

Shalom's book does not deal with the development of the nuclear project, but focuses on the construction of an Israeli nuclear option. "What is exciting," Shalom says, "is the Israeli success in creating an image of reliable deterrence without having to publicly prove its nuclear capability. In this sense, Israel is similar to a poker player who succeeds in creating the impression among the other players at the table that he holds all of the winning cards, despite the fact that he does not show them."

\* \* \* \*

Next while moving on let us speak briefly about the incredible potential for currency collapse as to dollar holdings while considering the botched up blight brought forth by the IMF, WB and generally, the IBC and all the corrupt and greedy game players in corporate market worlds of fraud and chaos.

Just stay alert, please. Last Friday the 5<sup>th</sup> the dollar hit an ALL-TIME LOW AGAINST THE EURO. Is that bad enough? No, it will get far worse, so stay tuned as manipulation picks up in gold, silver

and the you name it, markets.

What will happen to our program as considering GAIA? When we have the proper arrangements with the gold to which we "should" gain access, it makes not one iota of difference to us WHAT CURRENCY IS USED.

It actually doesn't matter ANYWAY but since gold backs the GAIA accounting through the U.S., originally in dollars, it takes some conversion mathematics and the hope that there is enough gold in the U.S. "treasury" to cover the debt owed is quite questionable. However, since we put a cap on the outrageous potential, we have a meaningful measure against which to work instead of off-the-map nonsense.

I would suggest, however, that a lot of that nice gold shipped to the Negev might better serve by bringing it home from whence it went traveling abroad. Israelis are NOT IMMUNE TO NUCLEAR FALLOUT and gold will become deadly in such radiation but quite SECURE for billions of years to come. Other than this observation we don't need to pursue the topic to its ending fragments. When you have nothing backing a currency—so be it for it will eventually collapse.

One more short article off the Internet might give an idea of global anticipation of problems already hitting the political lie and cheat circles.

You will also concern with "oil prices", etc.? Truly—WHAT CAN YOU DO ABOUT IT? I THOUGHT NOT! You will either buy "their" gas or you will park your gas-eating wheels. You will either be cold or buy "their" fuel. Is there a choice? Well, my day sometimes doesn't go too well either. Of course there are "choices" but you haven't been able to have them and THAT is the incredible bottom line.

Well so, you have a new U.S. President again elected and perhaps he will fix everything "this" time around? It isn't too likely is it? Perhaps the most amusing thing globally is the claim that Dubya won because of the "MORAL" vote and down-to-earth Christian attitudes. Oh, and killing BUNCHES of people everywhere around the globe is MORAL? Whose "right to life" do you consider, citizen? And, oh yes, "stem cell" research from fetal offcasts? Who will you "treat"? These are very interesting considerations, TO ME. What are you doing, people? What, in the world, are you doing?

Add in the "Dollar" article and then please allow us to get on about our work at hand. I have plenty of "time"—you do not.

\* \* \* \*

<[www.chicagotribune.com/business/chi-0411060221nov06,1,2230220.story](http://www.chicagotribune.com/business/chi-0411060221nov06,1,2230220.story)>

DOLLAR AT ALL-TIME LOW VS. EURO  
'GLOBAL SKEPTICISM' ON U.S. ECONOMY  
*Chicago Tribune, 11/6/04*

The dollar hit an all-time low against the euro Friday, falling on worries about oil prices and concern about the U.S. trade and budget deficits.

A Labor Department report showing that the economy added 337,000 jobs last month boosted the dollar earlier in the day. But then it resumed its downward trend, and later in the day the euro reached a new high of \$1.2964, surpassing the previous peak of \$1.2925, set in February.

The 12-nation euro, introduced on currency markets in 1999 and in its cash form in 2002, is now nearly 60 percent above its all-time low against the dollar of 82 cents in October 2000.

Oil prices, which remain relatively high despite a pullback in recent days, have raised doubts about the strength of the U.S. economy. That's on top of concerns about high U.S. trade and budget deficits, which have weighed on the dollar for months.

Economists say sentiment has turned so strongly against the dollar that positive news about the U.S. economy has little impact on its slide.

Dorothea Huttanus, an economist at DZ Bank in Frankfurt, cited "global skepticism about the U.S. economy because of oil prices" and persistent concern over the U.S. deficits. She noted that although the labor market figures were "outstanding", they only boosted the dollar for about an hour.

"If a payrolls [number] like this can't cause the dollar to rally, it's the clearest signal that there is something seriously wrong with the dollar," said David Bloom, a currency strategist at HSBC Holdings PLC in London.

Commerzbank analyst Christoph Balz said he expected to see the euro rise as high as \$1.31 but to settle lower in the long term.

French President Jacques Chirac said Friday he was "a little bit worried about the weakness of the dollar" and how it could affect European exports and the economy. He hinted that the European Union should take action.

But Chancellor Gerhard Schroeder of Germany, whose economic recovery has been fueled by strong export growth, played down concerns over the dollar's weakness.

\* \* \* \*

Perhaps if you consider the points that only touch a bit on the myriad of considerations, you can go back and do some reasonable research if you remain serious about my input or opinion but that, friend, is up to you. And no, do not flock to "here" for this team uses only cold water to save on electricity just to stay the course another day and somehow the outgo is always one way—out. Loans are the typical "gift" taking *modus operandi* while nobody "else" can even pay for a meeting place. It may well be quite interesting when we are pushed into "just saying no". It seems the only place to go for free is Hell! Please give this observation a bit more than overview.

I have been told by one in the past couple of days as "it" blasted away at us for lack of solving their problems: If you don't produce NOW, I am "out of here". Oh, ok, it was sometimes nice to know you, have a nice journey to wherever you are going in such an all-fired hurry. We didn't notice you fixing ANYTHING to help us get this job done other than quibble, demand, and of all things, threaten. So be it and may the choices to come, for you, be better than "this" one.

We ARE getting our task accomplished—even that one working toward that commodity of the centuries—money. Of course it is slow, for everyone wants something for NOTHING and the "nothing" stops here somehow in demand that we provide the "something". Oh well, what else is new in Wonderland? Some of you dump all your solutions onto us. My question is why haven't you done this job? Why haven't you solved these earth-salvaging problems? Why haven't YOU fixed it? Our program is NOT BROKEN, it simply awaits its proper sequence of time and events to BEGIN in order to properly keep moving. We care about each and every opinion but we cannot do anything about it otherwise so please know "we care" and thus may the problem YOU SOLVE be yours and not in usurping ours already under "solution".

## Call For Sanity Check

11/1/04—#1 (18-77)

MON., Nov. 1, 2004 7:10 A.M. YR 18, DAY 77

Manila, Philippines

RE: MY CALENDAR ENDS—COULD IT MEAN... ?—DJE/D

\* \* \*

### OXY-MORONS RULE THE DAY

I have, believe it or not, been asked for some "weekly update" from this desk keyboard. Well, fine, but it requires a daily diary to even begin to touch on the topics of mind-blowing and ongoing urgency, not to mention mayhem.

So, on the second day of Nov., 2004 the U.S. votes on who will rule the roost? Hardly, a WORLD watches to see whom to blame for everything amiss, next.

Whole columns in the local Philippine papers are given as to why, and especially the Philippines, the world can't vote in those U.S. elections since everything in the world "is run by the U.S.". As a U.S. citizen being in a position of distant travel location "can't" vote—our ballots didn't reach us even though a totally INCORRECT name and address packet reached us—from right here in Manila—and as registered mail no less. Oh well.

Oh yes, oxy-moronic update: "Philippine diplomats sent to Kabul to negotiate release of Filipino". There is NO SUCH THING as a "Philippine 'diplomat'". Then we can move on from that standpoint.

What is taking place with us and your interests here today? Well nothing, I guess, because my tally calendar ran out yesterday and thus perhaps the world ended? Surely enough it "appears" the same as yesterday and, as well, as the expectation of tomorrow yet to flit through like an invisible light wave. I'm sure the computer-kid will issue me some more calendar days but what of those other "invisible light waves"? Things look any way you choose to interpret—but documented and ongoing activities in this myriad of choices experience change like the winds of chaos.

Am "I" older today than yesterday? Of course! I have experienced another day and by all means it seems to represent a couple of dozen lifetimes since we got up yesterday morning and yet NOTHING "seems" changed. I must go back and consult Little Crow for I don't particularly like the other possibilities pouring in so quickly as to be unable to address them.

I have asked that the most recent update on potential scientific technology as relates to the world of "Bearden" be shared in the paper.

Now next, and sorry about this, friends: Get information from "Our Lady of Fatima" as is also being recently referenced and catch your breath from Russia's participation to the Japanese Yakuza. If you believe in "end times" it just might gain your attention just a tad while work goes on "as if" there is some hope for tomorrow. After that, we will refer everyone back to basics and the realization that we actually create and develop whatever comes to pass in our ongoing vision and playground of human expression.

Today is a BIG holiday here in the Philippines which goes right along with Halloween and Satan and

yet is presented as honor to the departed "All Saints" of which every departed seems to require waiting in the cemetery, rain or shine, feast or famine, to weave more stories of outrageous tales of fancy. The bigger liar wins the free burial coffin, which is hand-carved yet. Well, the ghost stories still can't match the real, live fiction of the day, anyplace World.

### TA FDN MEETING OF THE BOARD

Wow, what an interesting week and where oh where does one start and then interrupt while still not having anything more than trigger points for memory, for there are not enough pages in any book to adequately cover everything.

So, for the fifth time in a row we had a shut-down (out) of ability to actually do anything more than "talk and blather" in endless languages and points totally non-existent just the day before but fortunately new material came to further confuse and entertain. To take the most recent receiving as other than entertainment is impossible but made possible by acceptance of the absolute absurdities as seriously meaningful.

In our hope of demanding, at the least, a quorum we were again thwarted by the same parties who had to make visits to hospital and you name it, along with side-swapping and actually, frustration over "nap-time". (Literally.) The meeting was at 2:00 pm. No comment further about it but we changed the time back to 10 a.m. every other Saturday and we will wait and see while time passes and nobody does anything except US.

It was a good and interesting observation of serious Tagalog (language) show-and-tell with remarkable ability to miss every point presented in the tale of registered mail.

From the Gilarmi came a call on Friday that "you have mail". Oh, OK, someone at Gilarmi who knows us well had received and signed for the delivery and we thanked them much and EJ collected it immediately.

There were two registered pieces—both totally misdirected, misspelled as to even the names and the address totally screwed. Now this stuff came from the very "Prince" himself who had to have had all the PROPER information right at his hand. We know that the messages were FROM DA PRINCE, who isn't a prince, because it had his signature, oath and right thumbprint given as identification and notary backup (also fake). Oh well.

One envelope was addressed to Mrs. Dory and J. Eicker, Gilarme Apartment, Makati Avenue, Makati City, METRO MANILA (everything is WRONG).

The other envelope was addressed to Cenon Marcos, Gilarme Apartment, Makati Avenue, Makati City, METRO MANILA.

Oh, OK? No, not "OK". Flukeyville exaggerated. There was no way to have gotten the material to us except through fluke and fantasy. Thank you, GOD!

The papers contained an affidavit from Tallano that started right out with a big lie as to having been "first duly sworn" (that claim will do him totally "In" all by itself).

It was all addressed to the Securities and

Exchange Commission as an “affidavit of complaint” while information poured like vinegar without ability to discern the cause of the complaint itself until we found that somehow there was a wish to have the SEC dissolve the FDN. No chance, we just celebrated our annual event on Thursday, Oct. 14<sup>th</sup>—all in good standing, all documents in good order and all required filings, even to updates of “Articles” nicely filed—PROPERLY.

It was never established as to WHY “Eickers” [also spelled Eickkers] were even involved other than as some kind of a side-kick for use of getting some modicum of clearance for perchance getting cleared as to mailing registered letters.

If we choose to respond to this garbage we have at least a dozen outright lies and antics to hang good Prince of Wonderland. We will just wait, however, and see what, if anything at all, the SEC might do to bury the thing before it blossoms—called “nipped in the bud”. That is: Da Prince’s bud!

Genon Marcos was having a frustration breakdown, however, and it was a good opportunity to carefully point about the dozens of totally incompetent and irrationally irresponsible claims and antics. Tallano had included an affidavit, as well, from Victor Miraflor who claimed his name and thumbprint on the founding documents were forged and ID numbers given (BY HIM PERSONALLY) were not valid. Oh goodness, gracious me—talk about compounding your own position in outright stupidity, this is a good show.

Victor is one of the ones who was selling services to people trying to sell property he claimed Ekkers were buying (remember the hotel and helicopter incident?) and he had to collect money to do the documents and get our sign-offs. We never found out how many got scammed on that one before it came to our attention but what an interesting turn of events.

It is hard to believe that these people would be so stupid as to now go further and add this to their bungled mess of causes of criminal actions. We did have a good bit of fun, however, to find that “Prince” had also attached an “Annex” to the affidavit, which reflected something he had labeled “Third Amended Letter of Administratorship in Favor of Prince Julian Morden Tallano” to which he also affixed his SIGNATURE and THUMBPRINT. (Matching correctly, no less.)

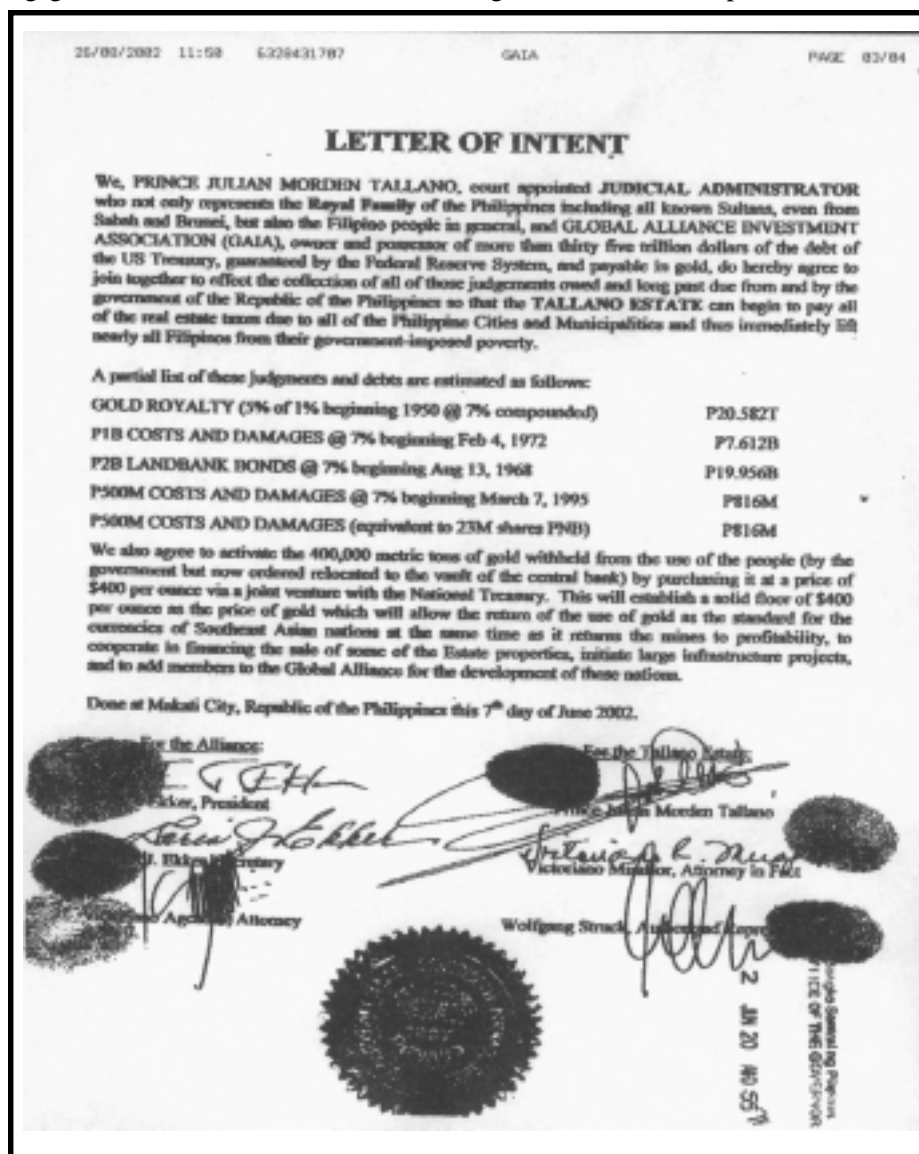

OK, in that “letter”, dated June, 27, 1991, it seems he personally RE-WROTE the statements in the WILLS of his deceased forebears as to land distribution, titles and even to gold holdings “lent” to the Central Bank (785,000 metric TONS) for which it is assumed that some rental payments were made. Now, readers, 785,000 tons is interesting enough even if you fail to remember our prior writings on the topic.

Ah but: In this affidavit of October 22, 2004 (but also stating at “Signature”, August 2, 2004), the amount of gold reflected is, catch your breath and hold it: “Two Million Five Hundred Thousand Metric tons (2.5M tons) lent by the Tallano Royal Families to the Republic of the Philippines, as gold reserves during the ESTABLISHMENT of the Central Bank of the Philippines (NOT BANGKO SENTRAL OF 1993) which are now missing due to manipulation of then and late President E. Marcos, to the damage of the said royal clans...” We hope there will be room to run all of this stuff because it is a

treasure of reference material. This claim would indicate Tallano has supporting documents.

If nothing else this proves that Julian Morden Tallano has no business running any business of any ESTATE of ANYONE. He is either pathologically compromised or, more certainly, incapable of administration of even his own life as is evidenced by his very “LIFE” itself.

I do ask that our agreement with this man and Miraflor of June 7, 2002 (Letter of Intent) be re-run here for background for judging our own SANITY. Further due diligence uncovered that we would also be responsible under that agreement to reclaim that which was removed or moved by Ferdinand E. Marcos and a sorting of lands already issued to the various Sultanates. Wow, and now it gets thicker and deeper:

“2.5 M. TONS” worth.

OK, so we move on because I do have a day to sort this week’s hits and misses, we will move to EJ’s meeting earlier with some people we will leave unnamed to protect innocent parties.

EJ did, in fact, go TO these parties instead of meeting here to protect all parties and it was a dandy meeting. EJ shared the Bearden stuff because journalists were involved and we like to share where possible. Ah but, there were lawyers present, as well, to find out other information re: Tallano (GAIA is cleared and brings little attention or debate).

This went well and off the lawyers went to dig a bit and check into the state of affairs of injunctions, etc., at the Court of Appeals (CA). It was suggested that there would have to be a MAJOR sum payoff to “de judges” in the case to get the gold inventoried. Payoff was instantly declined so then comes a claim that the “land case” had been heard and ruled on by the Supreme Court (SC) against Tallano. Wrong. The Supreme Court *en banc* ruling was against the

adverse parties and actually, therefore, clearing the Tallano claim to the titles.

Well, we aren’t into “titles” or land acquisition or disposition, ourselves, so who cares. There is need to proceed with our other agreements to the best of our ability and from there we have to move. However, the higher-elite scared the britches off the lawyers and they don’t want to even use the word “Tallano” any longer.

Please remember, friends, that Judge R. is OUR GAIA ATTORNEY and was the Judge (last) in the Tallano rulings. He sits in on the FDN meetings to keep it honest and properly interpreted. We will have to now run by him the SC claims to prove we are not nuts and fidgets. We need DAILY meetings just to sort the ongoing impacts but we can’t afford it and talking everything to death doesn’t solve anything.

Among the other claims of Tallano is that he had a working FDN already established, blah, blah, blah and in fact the SEC has a record of one of them in, it appears, sometime about 2001 but it reflects nothing of the COURT ORDERED ENTITY. Moreover, NOTHING further shows as to that entity as to requirements of the SEC. Therefore nothing about the “incorporation” is valid or current. But the interesting point here is that Prince quotes: “Ordering the Administrator, Julian M. Tallano to do the following acts And function for and in behalf of the landowners, here to wit.” FIRST ORDER OF THE DAY: “ORGANIZE AND ESTABLISH FOUNDATION IN THE NAME OF DON ESTEBAN BENITEZ TALLANO AND DON GREGORIO MADRIGAL ACOP TO PURSUE THE OBJECTIVES...”

**OK SO FAR? THAT WAS ACCORDING TO AN ORDER OF CLARIFICATORY DECISION RENDERED ON JANUARY 19, 1976.**

Oh my; 25 years later still in contempt of court by establishing the WRONG Foundation and NOW IT IS 29 YEARS STILL IN CONTEMPT OF THE VERY FIRST ORDER HANDED DOWN TO THIS “ADMINISTRATOR TALLANO”.

Do we consider this some kind of bad news? No, certainly not, for it

points up the utter lack of good management in BEHALF OF THE FILIPINO PEOPLE to whom a minimum of 50% of the wealth is bequeathed directly by and through the courts.

If you want to consider 2.5 M. Tons of gold, half isn’t bad! How about 250 Tons? Indeed a good, very good, start! Ah but, we still have to get through the bank doors and past the IMF-WB ARMY OF CRIMINALS.

I would guess that the next move will be to establish our “personality” as some kind of participant or replacement for the person of “administrator” to gain recognition of the court system in order to fulfill our other requirements at the SEC for a full accounting of the Estate, the FDN, AND whatever else now falls to the FDN now established and in good standing—except for those missing documents stashed and refused turnover BY THE FORMER ADMINISTRATOR OF THE ESTATE, JULIAN MORDEN TALLANO who still shows as Chairman, “soon *emeritus*” and certainly “missing”.

Tallano went even further in his affidavit, under oath, and said he had never even attended a meeting of the FDN. Oh? Wow, he not only attended a major meeting of the FDN but made a pure ass of himself along with the four-five (can't remember which) people he dragged in with him. My goodness gracious, it appears every encounter with VK Durham is reflected in our life over and over again—AH BUT, with total lack of even a notion of concern or impatience. Once experienced, in fact, it becomes the exercise fun of the moment. We are finally getting somewhere, team-mates.

Will we live long enough? Certainly, because “long enough” has no meaning whatsoever without full limitation guidelines offered in this “contract”. Some days it has already been “too long”.

I would share another notation of interest about this particular day called All Saints. There is so much taking place at the cemeteries which needs monitoring, like drug exchanges and weapons removal, that the city itself is all but shut-down to allow the police to be in the cemeteries also. Our view of a bustling city is like looking out over an empty cemetery this morning. There must be more to “this” than “THIS”. And yet, an inversion layer had brought the pollution right down to meet the ground so all the better to spread disease and interchange germs and yes, spoiled food poisoning. HOT and damp, picnics in the graveyards while the poisoning may well take out a few (population) the “love-in” will add MORE and MORE and MORE, without parents, without food and without, without, without!

The desire here is just to go crawl back UNDER the bed—except that with its broken legs and feet it is a waverly 2 inches, only, off the floor. I guess I'll just go turn on *CNN* and watch the show-and-tell of who blows up whom, beheads whom and without the wisdom of forefathers—kills the intent of democracy and FREEDOM. Do we lay odds about a good and immediate presidential decision? Anyone for fiasco and debacle?

We understand that it will be a “good” election process because of the new abundance of electronic voting? Who in hell are we kidding? We can't even keep the viruses out of our email so welcome aboard ye Elite of the Controllers. Do we have a favorite? Yes indeed, but he isn't running. I even keep hoping for SuperFund Daddy for obvious credibility reasons but there is such a falling out between Washington and Manila that it is not likely to evolve. We have encountered “stranger” things, however. This very week has presented with several examples [not publishable] for current reminding.

Keep smiling as we hear it causes less wrinkles than frowning. Besides, in the midst of chaos your smile causes others to smile back and that makes us all look totally idiotic in the face of “imminent” gain or disaster—whichever strikes first. It truly is all in the perception and on which side of the street we find selves.

May the “Force” be with us because I, for one, am ready to win a round or two in this game laid forth for our participation. We know on whose side we serve; we just can't have human vision to see beyond the veil in full clarity—which may well be a good thing. I believe, truly, we want the “knowing” so we can STOP MAKING AN EFFORT to change anything. In fact, if the end of the world happens this afternoon most of us will hope we didn't wash the dishes for nothing. Obviously we will each be exactly where we are in any event.

Love and our very best wishes filled with HOPE so that, at the least, we all “feel better” in the continuing journey.

DJE

# Electromagnetic Weapons & Asymmetrical Warfare

## By T.E. Bearden (Part Two)

*With gratitude and appreciation to Tom Bearden and <www.cheni.org>, we continue with this presentation of amazing “super-science” developments in an effort to give this information the widest possible circulation at this time.*

### SCALAR ELECTROMAGNETIC WEAPONS AND THEIR TERRORIST USE: IMMEDIATE STRATEGIC ASPECTS OF THE ASYMMETRIC WAR ON THE U.S.

By T. E. Bearden, 10/13/04  
Drafted Sept. 11, 2004 on the Third Anniversary of  
9/11/01

#### 7. OUR ARCHAIC AND FLAWED SITUATION IN CEM/EE TODAY

Sadly, electrical engineering departments still erroneously teach EM force fields and EM transverse EM force field waves in space, which still assumes the old luminiferous material ether {1}, even though it was falsified in 1887 by the Michelson-Morley experiments {2}.

Jackson, one of the superb classical electrodynamicists of our day, at least admits the problem and also admits that electrodynamicists continue to ignore it. He states {3}:

*“Most classical electrodynamicists continue to adhere to the notion that the EM force field exists as such in the vacuum, but do admit that physically measurable quantities such as force somehow involve the product of charge and field.”*

In summary, one does not have electromagnetic force until the “force-free precursor field in space” is interacting with charged mass. It can easily be seen by examining the simple standard EM equation  $\mathbf{F} = q\mathbf{E}$ , and writing it as  $\mathbf{F} \circ \mathbf{E}q$  so that it becomes a true definition. Now let  $q = 0$ , as it would be in space. In that case,  $\mathbf{F} = 0$ , even though  $\mathbf{E} \neq 0$ . In that identity, force is the ongoing interaction—of the force-free  $\mathbf{E}$ -field in space—with charged mass  $q$ . Given  $q$  and its interaction with force-free  $\mathbf{E}$ , that ongoing interaction is the rigorous definition of—and generatrix for—force itself. What is missing from the identity and therefore the definition is that  $\mathbf{F}$  and  $\mathbf{E}$  are at right angles to each other because of the spin of the charged particles comprising  $q$ .

Again, let  $q = 0$ , while  $\mathbf{E}$  remains nonzero. In that case, there is no ongoing interaction of  $\mathbf{E}$  with charged matter, since *there is no charged matter*. Therefore the effect of such a reaction—force  $\mathbf{F}$ —goes to zero because *there is no interaction* and therefore *there is no effect of an interaction*. So the equation should really be written as an identity, to show clearly that force is produced by, and exists as, *an ongoing interaction of the force-free E-field in space with charged matter q*.

The sharp-eyed reader will note that we may have (hopefully successfully!) solved Feynman's force definition problem, at least electromagnetically: *An electromagnetic force in static charged matter is identically the ongoing effect (in the static charged matter) of an ongoing interaction of the force-free EM field in space with that static charged matter*. Further, the direction of the force field effect is at right angles to the direction of the primary force-free EM field in space.

Eminent scientists such as Feynman, Wheeler, Lindsay, Margenau, Bunge, and many others have pointed out that there are no force fields in space. But our electrical engineering departments and classical Maxwell-Heaviside electrodynamicists refuse to change and correct the horribly flawed CEM/EE model.

Repeating for emphasis, Feynman {22} stated it this way:

*“...the existence of the positive charge, in some sense, distorts, or creates a “condition” in space, so that when we put the negative charge in, it feels a force. This potentiality for producing a force is called an electric field.”*

In other words, a “force-free condition in pure mass-free space”—which only has the *capability* to interact with a charged mass and thus create force in that ongoing interaction—is what a true  $\mathbf{E}$ -field is. Feynman understood that true fields were naught but conditions in space itself, and change in space itself. He clearly understood that only the interaction of the field with charged mass, should some be introduced, produces EM force fields in that mass.

So our present EEs have absolutely no notion at all of what a force-free EM field in mass-free space really is. *They have never even calculated a real E-field in space, and they do not do so today—nor do their professors and their textbooks.*

#### 8. OTHER SEVERE FOUNDATIONS ERRORS IN OUR CEM/EE

Indeed, the inane CEM/EE model still erroneously assumes a flat spacetime (falsified since at least 1916), an inert vacuum (falsified since at least 1930), and a material ether (falsified more than a century ago). It also assumes that every EM field, EM potential, and joule of EM energy in the universe is and has been freely created out of nothing at all, by the associated source charge, which is assumed to continuously emit real observable EM energy without any energy input at all. In so doing, the CEM/EE model implicitly assumes the universal violation of the conservation of energy law.

*Every EE department, professor, and textbook in the United States unwittingly advocates the total violation of energy conservation, without even recognizing it.* So do our National Academy of Sciences, National Science Foundation, Department of

Energy, great national laboratories, our intelligence analysts—and the entire Taliban-like professional Skeptic community<sup>3/4</sup> by not pointing out the known terrible errors in classical electrodynamics and electrical engineering, and *by not correcting the flawed model!*

## 9. THE DEVELOPMENT OF SCALAR INTERFEROMETRY

There are two papers by E. T. Whittaker, one in 1903 {18} and the other in 1904 {19}, that detail the beginning of scalar interferometry. Shortly after WW II, these two papers are what the Soviet Union scientists used as one of the starting points to develop a secret weapons science called *energetics*. From their new science of energetics, they first developed very powerful *scalar interferometers* (now possessed secretly by at least 10 nations worldwide, and even by the Japanese Yakuza). For a deeper understanding of scalar interferometry, a higher group symmetry electrodynamics must be used {13}, instead of the Standard Model's limited U(1) electrodynamics.

From Russia, the Yakuza also took back the actual scalar interferometry technology to Japan with them, and set up production facilities of their own. It is not the Japanese government that is doing this, but it is the Japanese Mafia and a remnant of the Aum Shinrikyo (which changed its name to Aleph). **[We might tend to dispute the criminal nature of governments with Mr. Bearden but will not do so at the expense of detracting from his excellent presentation.]** The Yakuza is very powerful, and it penetrates the Japanese government and also every large Japanese company. If one is dealing with a large Japanese company, one is dealing with the Yakuza, whether one knows it or not.

In 1997, then Secretary of Defense William Cohen—at a conference on Weapons of Mass Destruction (WMD), held in Georgia under the auspices of Senator Sam Nunn—publicly confirmed this kind of electromagnetic weaponry without the technical details. He also confirmed the weather engineering, climate control, induction of earthquakes, and stimulation of volcanoes into eruption. SecDef Cohen stated {4}:

*“Others [terrorists] are engaging even in an eco-type of terrorism whereby they can alter the climate, set off earthquakes, volcanoes remotely through the use of electromagnetic wave. ... So there are plenty of ingenious minds out there that are at work finding ways in which they can wreak terror upon other nations. It's real, and that's the reason why we have to intensify our efforts, and that's why this is so important.”*

This was the first time (and to my knowledge, the only time) a high U.S. government official has openly confirmed the superweapons. So obviously certain parts of our government do know about such weapons, but there has been little or no communication of that to the public, save by SecDef Cohen's illuminating statement.

The news media at the time—panting heavily after the juicy Clinton-Lewinsky sex scandal—totally ignored Cohen's epochal strategic statement. So much for the perspicacity of our news media!

## 10. THE YAKUZA STRATEGIC ROLE IN OUR PRESENT TERRORISM THREAT

Today the Yakuza/Aum Shinrikyo is one of our deadly foes, and it will be involved in the planned, scheduled destruction of the United States within about three years from now. One major part of the plan seems to be to start destroying the U.S. central power

grid and system beginning about two years from now, very gradually at first<sup>5</sup>, and then escalating fairly rapidly until the system is essentially destroyed and in ruins. There are already sufficient terrorist assets inserted into the U.S.—being held ready and waiting—to destroy the nation, particularly when the use of Yakuza strategic and tactical scalar interferometers are factored in. One keeps hoping that the Administration will brief that fact to the U.S. public, but it appears it will not be done, regardless of whether we have a Republican or Democratic administration in power. *Too many high level government people take the attitude that the American public just could not withstand such information.* Further, within the government the entourage seems to have again suppressed the information that Defense Secretary Cohen confirmed.

The Yakuza strategic threat to the U.S. is one of the most potent we face today, and it increases year by year. That threat—as is much of the organized international terrorist threat—is being generally coordinated from the old die-hard Communist faction of the FSB/KGB, the dominant faction.

## 11. SUPPRESSION OF “ENERGY-FROM-THE-VACUUM” ELECTRICAL SYSTEMS

Electrical power systems freely taking their energy from the vacuum (EFTV) rather than from fuel, are suppressed worldwide by several large and powerful cartels—and for some time the Yakuza has suppressed such Japanese EFTV systems in Japan.

As part of their schedule and plan to destroy our electrical power supply as a means of generating the catastrophic collapse of the U.S. economy, the Yakuza have suppressed several legitimate Japanese overunity electrical power systems—such as the Takahashi magnetic Wankel engine {6} and the Kawai motor {7}—to prevent them from being marketed.

Were these already-developed Japanese systems allowed on the market, they would quickly resolve the world energy crisis for once and for all, and they would also enable dismantling and rapid replacement of the horridly vulnerable, centralized U.S. electrical power system. Needless to say, the availability of such systems would enormously clean up the biospheric contamination from energy-related operations and development, alleviate global warming, etc.

It is asinine that, in every EM circuit and system, all the field energy and potential energy already comes directly from the vacuum, being extracted by the source charges and dipolarities, and yet our own scientific community perpetuates a model assuming the energy is freely created out of nothing at all.

*We do not have to discover how to extract usable EM energy from the seething vacuum; every charge in the universe already continuously does that, and it continuously gushes forth real EM energy extracted from its vacuum interaction.* All we have to do is uncover and eliminate the continuing limitations our scientists have unwittingly incorporated into the CEM/EE model itself—such as in the ubiquitous closed current loop circuit containing the source dipolarity (the source of flowing potential energy) wired into the external circuit as a load to be continually destroyed—and such as insisting on invariance and Lorentz symmetry of the model because of the “mathematical beauty” in symmetrized equations and an invariant system. By “invariance” one means that no new net observable is allowed to occur when the equations are regauged. To do that requires *symmetrical* regauging.

On the other hand, by deliberately breaking up the invariance and violating Lorentz symmetry, the

resulting modified circuits and systems can indeed rather freely collect excess energy (i.e., asymmetrically regauge themselves) from the active vacuum's interaction with all the circuit's charges and the continuous, free flow of real EM energy from every charge. By *asymmetrical* regauging, a *net nonzero, free force field* is also produced, and it can then be used to freely dissipate the previously-collected “free potential energy” in external loads to power them almost “for free”, as far as any cost to the operator for the energy dissipated. No law of physics is violated, and no valid law of thermodynamics is violated once the erroneous Second Law is corrected and is no longer the oxymoron and “half law” it presently is.

Sometimes simple equations contain profound truths. From any fixed source of potential  $V$ , any amount of energy  $W$  can be freely collected on intercepting charges  $q$ , *given sufficient  $q$* . The simple equation is  $W = Vq$ . Further, by only increasing  $V$ , while pinning a fixed amount of charges  $q$  so that  $i = dq/dt = 0$ , *any amount of potential energy density  $V$  can be freely produced in the system by work-free voltage amplification.* From such simple equations, one can see that a circuit can self-regauge and take on extra potential energy freely, from any external source of potential energy (providing the necessary potential energy flow), without having to do work. With  $dq/dt = 0$ , the free potentialization of as many charges  $q$  as one desires does not drain the external source of potential at all. If that source of potential is then disconnected, and the circuit is closed and the charges  $q$  are unpinned, the freely potentialized circuit can then freely dissipate that excess energy to power loads “for free”. Further, the original source of potential can then be reconnected, to again freely potentialize as many charges  $q$  as desired, so long as one forces  $dq/dt = 0$ . In short, the external source of potential will last indefinitely. *Via a flashlight battery or electret as the “external potential source”, under proper circumstances sufficient energy can be extracted from the vacuum to power New York City.*

Again, *we do not have to learn how to extract energy from the vacuum. We only have to learn how to more properly use the energy flowing from charges already doing so.*

Our classical electrodynamicists and electrical engineers have missed the fact that, since every EM field and potential is a pattern in the continuous flow of EM energy from the associated source charges, then the field or potential is itself a set of continuous energy flows. To see it and prove it, simply decompose the field or potential by Whittaker's methods {18,19}.

As an example of Yakuza suppression of Japanese EFTV electrical systems, the Kawai motor was suppressed by the Yakuza right here in Huntsville, Alabama in 1996, directly involving the CTEC Board of Directors. Else my colleagues and I in CTEC would already have placed self-powering Kawai motors on the world market in mid-1997.

Such self-powering electrical systems are no more mysterious than a windmill-powered generator or a solar cell array power system. The active vacuum environment furnishes all the energy required. Even though any system has losses and its overall thermodynamic efficiency is always less than 100%, the coefficient of performance (COP) can permissibly be  $COP = \infty$  when all the energy is received from the external active environment and the operator himself does not furnish any energy at all.

We (CTEC) reached agreement with Kawai late one Thursday afternoon. The Yakuza arrived by private jet from Los Angeles that night. The next

morning a stunned and totally demolished Kawai no longer controlled his invention, his company, his life, or further developments.

The “energy from the vacuum” replacement systems—for our present centralized electrical power system—would freely or nearly freely take their energy directly from the local vacuum. They would need no external fuel, no pipelines, no large fleets of tankers and railroad coal cars, no hydrocarbon refineries, etc. So most of the massive and expensive *support structure* for our bloated centralized electrical power system would also be dismantled. Our present dependence on foreign oil and gas would simply vanish forever. A very dramatic reduction in present pollution of the environment would result.

The dramatic reduction in the present absolute vulnerability of the U.S. electrical power system would be remarkable. Replacement of most of the centralized power system would be of enormous economic benefit and of enormous strategic importance. Presently, we have some two years to get a substantial percentage of that task done, in precisely that manner. Otherwise, we will see the centralized electrical power system destroyed, followed shortly thereafter by the catastrophic collapse of the U.S. economy. And then will immediately follow the methodical destruction of the United States—every last man, woman, and child.

The resulting benefits of such a centralized, fuel-free system to the taxpayer and to the long suffering destitute peoples of the world would be incalculable—but the incredible loss of revenue to the large energy cartels now in power worldwide would be directly calculable! Such powerful organizations do not surrender their vast empires and dominant positions without a major struggle.

So certain elements of those cartels already suppress “free energy” developments worldwide, and they have been doing so since Stubblefield {8} (even before Tesla). In this “energy from the vacuum” research, if successful one can easily “meet with a sudden suicide” on one’s way to the supermarket, unless one is exceedingly careful. Or one can be hit in the midst of a crowd by an ice dart dipped in curare, so that one convulses and dies right there with a “seizure” and heart and brain damage.

Or heroin can be planted on the premises secretly by an intruder. Then the regular “narcs” are “tipped off”. They raid the place, the dogs sniff out the large cache of heroin, and one has “been caught red-handed” as a dirty old dope dealer. One winds up behind bars for 20 years or so, wondering how it all happened.

Or one meets with a “throw-away” assassin, who has been brutally conditioned. After he successfully fixates on his target, then later he will march right up to the targeted individual in a public restaurant, pull out a pistol and empty it at point blank range into the target, killing him. He will remain right there until the police come and haul him away. And even electric shocks on his testicles will not elicit any useful information from him.

Or, more simply, one just meets with a fatal auto accident.

Or one gets hit with a little microwave “shooter”, whose wavefront has been carefully modified by the Venus ECM technique. That beam will then dramatically disrupt the receiving heart, throwing it into violent and uncontrolled fibrillation. The target falls, goes into convulsions, thrashes a bit, and expires with a legitimate massive stroke, heart attack, or both. The smaller short range shooter is about the size of a small paperback textbook, and fits inside the assassin’s coat pocket. A larger longer range shooter is about the

size of a bazooka. It will shoot right through walls and windows, killing a person inside (the target is usually located with an infrared device which allows the assassin to focus on the target’s body heat, even through the wall or window).

Or a professional hit man kills the person, making it appear as some hoodlum committing a robbery or some such. Recently Dr. Gene Mallove, an excellent researcher and a highly dedicated scientist, probably was murdered in this latter type of professional hit manner.

Those are just a few of the current methods used of professional clandestine assassination or jailing, used against some EFTV researchers. There are many others.

But to seek out what our own science is doing in EFTV research, simply go to the websites of the NAS, NSF, DoE, national labs, and universities and search for any real program or solution that would enable our survival in this three year period we have entered. Cut through the rhetoric and hype and examine for real content that would solve the problem. There is none, and there is not going to be any. Instead, the reader will find that “business as usual” and the interests of the powerful scientific cartels—hot fusion, nuclear power plants, fuel cells, etc.—are being pursued, with a little sop to the environmentalists in such things as solar cell array power systems, windmill-powered generating systems, etc.

*Not only is our scientific community fiddling while Rome prepares to burn, but it is also helping to ensure that Rome burns completely.*

## 12. YAKUZA PRODUCTION OF PORTABLE SCALAR INTERFEROMETERS

The Yakuza now produce their own scalar interferometer weapons in their own facilities in Japan, including small, portable versions, and this has nothing to do with the Japanese government. The Yakuza have small versions of these weapons which can fit into a small sport utility vehicle (SUV), and undoubtedly some are also already inserted in the U.S., to be used a few times during the next two years against our refineries, nuclear power plants and hydrocarbon-fueled power plants, oil fields and Gulf oil rigs, control systems and substations for the centralized power grid, pipe line hubs, long high voltage distribution lines, etc. In short, *the Yakuza can already lay down the U.S. electrical power system, for months at a time or permanently—and it can do it easily, quickly, and at will.*

Even normal cyberwar techniques will do it for extended periods, as is well known by cyberwar specialists. For example, quoting from a PBS interview with Joe Weiss {9}:

Question: “So just put it all in perspective. What’s the worst-case power scenario, power we’re talking here—power lines, power grid?”

Answer: “Absolute worst? I won’t even say absolute, but a very worst case could be loss of power for six months or more.”

Question: “Over how big an area?”

Answer: “Big as you want.”

Question: “Is that a possibility?”

Answer: “Yes.”

Presently we are in the two year “slowly escalating” initial operations phase of the centralized asymmetric warfare plan for the destruction of the United States.

Then, beginning about two years from now, the final operations phase will swiftly occur, and the already damaged entire U.S. centralized electrical power system will be destroyed quickly and rather

permanently. The destruction will be by combined attacks, including cyberwar, with a guaranteed destruction furnished by Yakuza tactical and strategic interferometers, portable EMP shooters, etc.

Again, all this is coordinated by centralized FSB/KGB planning under its major faction, the old die-hard Communists who control the FSB/KGB and also control and operate the Russian superweapons. That Communist faction of the FSB/KGB thus has and retains the dominant power position in Russia, because it possesses the Russian superweapons.

Copiously supplying lots of Russian oil to the United States is not the intention of the dominant die-hard Communist faction, because that faction still fervently plans to totally destroy the United States. Russian President Vladimir Putin comes from the younger, more modern faction of the FSB/KGB. That faction would very much like to reach a full accommodation with the U.S. Putin would like to become our trusted cheap oil supplier, and pump lots of U.S. development and royalty money into the Russian economy, benefiting it at every level.

But Putin will not be permitted to do that to the full extent {10}. Consequently, Russian oil shipments to China, over land by rail, have been stopped, stimulating China into becoming more aggressive in other world oil markets such as the MidEast. The largest oil consortium in Russia is under strong legal attack and direct interference by the State, significantly hampering its production and delivery of oil, particularly to the U.S. ***[But please note that Russia and China have just concluded major, “breakthrough” trade agreements including Russian deliveries of oil.]***

The old Cold War has not gone away, contrary to popular conception. Instead, it has just been turned into a completely different kind of war, called “asymmetric” warfare. And the same old dogs are still calling the shots, like a tired old black-and-white movie from the 1930s. Hence our asymmetric war problems (i.e., our *War on Terrorism* and the war of terrorism on us) will continue. As an example, Putin has had to cave in to pressure and again centralize and tighten the control of the Russian government, setting aside the reforms of open election that had been partially implemented {11}.

# World News Insights

CHINA ROCKS THE POLITICAL BOAT  
Asia Times, 11/6/04

TEHRAN—Speaking of business as unusual. A mere two months ago, the news of a China-Kazakhstan pipeline agreement, worth US\$3.5 billion, raised some eyebrows in the world press, some hinting that China's economic foreign policy may be on the verge of a new leap forward. A clue to the fact that such anticipation may have totally understated the case was last week's signing of a mega-gas deal between Beijing and Tehran worth \$100 billion. Billed as the "deal of century" by various commentators, this agreement is likely to increase by another \$50 billion to \$100 billion, bringing the total close to \$200 billion, when a similar oil agreement, currently being negotiated, is inked not too far from now.

...Iran has an estimated 26.6-trillion-cubic-meter gas reservoir, the second-largest in the world, about half of which is in offshore zones and the other half onshore.

It is perhaps too early to digest fully the various economic, political and even geostrategic implications of this stunning development, widely considered a major blow to the Bush administration's economic sanctions on Iran and particularly on Iran's energy sector, notwithstanding the *Iran-Libya Sanctions Act* (ILSA) penalizing foreign companies daring to invest more than \$20 million in Iran's oil and gas industry.

While it is unclear what the scope of China's direct investment in Iran's energy sector will turn out to be, it is fairly certain that China's participation in the Yad Avaran field alone will exceed the ILSA's ceiling; this field's oil reservoir is estimated to be 17 billion barrels and is capable of producing 300 to 400 barrels per day. And this is besides the giant South Pars field, which Iran shares with Qatar, alone possessing close to 8% of the world's gas reserves....

For a United States increasingly pointing at China as the next biggest challenge to its *Pax Americana*, the Iran-China energy cooperation cannot but be interpreted as an ominous sign of emerging new trends in an area considered vital to U.S. national interests....

...Concerning India, which signed a memorandum of understanding with Iran initially in 1993 for a 2,670-kilometer pipeline, with more than 700km traversing Pakistani territory, the Iran-China deal will undoubtedly give a greater push to New Delhi to follow Beijing's lead and thus make sure that the "peace pipeline" is finally implemented. The same applies, *mutatis mutandis*, to Russia, which has as of late been dragging its feet somewhat on Iran's nuclear reactor, bandwagoning with the U.S. and Group of Eight (G8) countries on the thorny issue of Iran's uranium-enrichment program. The Russians must now factor in the possibility of being supplanted by China if they lose the confidence of Tehran and appear willing to trade favors with Washington over Iran. Russia's Gazprom may now finally set aside its stubborn resistance to the idea of entering major joint ventures with Iran.

Iran appears more and more interested to join the Shanghai Cooperation Organization (SCO) and form a powerful axis with its twin pillars, China and Russia, as a counterweight to a U.S. power "unchained". The SCO comprises China, Russia, Tajikistan, Kazakhstan, Kyrgyzstan and Uzbekistan.

China, Russia and Iran share deep misgivings about the perception of the United States as a "benevolent hegemon" and tend to see a "rogue

*As the Neocon-driven Emperor with no clothes casts America's youth on the altar of Moloch (look it up, please) in the wake of the jackals' failure to produce acceptable results for the IBC in Iraq, a powerful coalition of nations is coming together to oppose this heinous, illegal and unlawful behavior.*

*According to Dictionary.com, "terrorism" is defined as "The unlawful use or threatened use of force or violence by a person or an organized group against people or property with the intention of intimidating or coercing societies or governments, often for ideological or political reasons."*

*The primary thrust of Russian diplomacy in recent months seems to have been to gain agreement with other nations as to what constitutes terrorism and how to STOP IT. The following article should give an idea as to the seriousness of this effort.*

[QUOTING:]

RUSSIAN PRESIDENT PUTIN PLANNING TO GLUE TOGETHER THE MOST POWERFUL SUPERPOWER COALITION IN THE WORLD—INDIA, CHINA, RUSSIA AND BRAZIL

India Daily, 11/10/04

By Sudhir Chadda

Russian President Putin is taking a lead role in putting together the most powerful coalition of regional and superpowers in the world. The coalition consists of India, China, Russia and Brazil. This will challenge the superpower supremacy of America as well as the European Union. The Chinese are concerned about American and European influence over the world. So is India, Brazil and Russia. Russians need Brazil badly. Brazil is in South America in the American corridor. According to *Stratfor*, a strategic think tank, when Russian President Vladimir Putin visits Brazil Nov. 21-23, he likely will talk economic issues with Brazilian President Luiz Inacio "Lula" da Silva. However, Putin has bigger ambitions: He wants to establish a long-term Russian footprint in Latin America in order to expand Moscow's geopolitical influence in the region. Brazil is very open to the coalition concept where these large countries support each other in term of trade, economics, international politics and defense.

According other think tanks, this coalition will have an overwhelming influence over the United Nations. Russia and China are permanent members of the security council. India and Brazil are in the process of becoming the same. In terms of population, the coalition will have three quarters of the world population, largest amount of natural resources and largest pool of technical and scientific talent.

[END QUOTING]

*While the Neocons have selected Iran as the next target in the bogus "War on Terror", China and Iran appear to be involved in the "deal of the century", which could be worth up to \$200 billion. Can you say, "Leave my friend alone"? No doubt China can. Given the Russian Sunburn missile technology (and yes, the Chinese have been given this technology, along with Russian Sovremeny-class destroyers from which to fire them), there is also no doubt China is fully capable of holding its ground on this issue.*

*Before push comes to shove, let's hope and pray saner thinking will prevail.*

barrel, and continuing to slowly rise.

6. (a) "The Takahashi Magnets and Motor", *Infinite Energy*, Vol. 1, No. 5&6, Nov 1995/Feb1996, pp. 35-37; (b) Tony Edwards, "'Accident' in lab creates super motor", *The [London] Sunday Times*, Dec. 10, 1995. Edwards reported an electric motorscooter with top speed of 50 mph and range of more than 500 miles using an electromagnetic engine and magnets developed by Takahashi. The new scooter, developed by Sciex Corporation of Japan, ran on four ordinary 12-volt car batteries. The magnets were based on powder-metallurgy techniques and special neodymium material which produced a magnet with the world's highest Megagauss Oersted rating at the time. 55 MgOe was the maximum previously, but Takahashi's magnet material achieved 120 MgOe. The Takahashi engine produced 15 horsepower from just a few amperes of electricity. When the scooter was free-wheeling, the engine became a generator and partially recharged the batteries.

Another novel use of the Takahashi magnets was as "battery doublers" to extend the life of rechargeable batteries. Thin inch-wide squares, attached to mobile phone batteries, doubled the amount of charge they retained and allowed the batteries to last twice as long. (c) Also see entries under magnetic Wankel engine, in T. E. Bearden, *Energy from the Vacuum: Concepts and Principles*, Cheniere Press, Santa Barbara, CA, 2002, p. 363-368.

8. Appreciable details on Nathan Stubblefield and his inventions are given by Gerry Vassilatos, *Lost Science: New Edition*, Adventures Unlimited Press, 2000. Tesla visited Stubblefield and got some of his own impetus from observing the anomalous and awesome electrical power effects achieved by Stubblefield.

9. See <<http://www.pbs.org/wgbh/pages/frontline/shows/cyberwar/interviews/weiss.html>>.

10. According to Italian channel RAI 1, on Sept. 18, 2004 there was an attempt on Putin's life by planting two car bombs along his automobile route. Security forces discovered the cars and dismantled the bombs. Putin has also just nullified the election process in Russia, and has thus returned the nation to some of the stronger control mechanisms by the old Communist Party methods. One suspects the heavy hand of the Communist faction of the KGB/FGB—which controls the organization and thus controls Russia—is behind the return to greater authoritarian hold of the populace.

superpower” instead. Even short of joining forces formally, the main outlines of such an axis can be discerned from their convergence of threat perception due to, among other things, Russia’s disquiet over the post-September 11, 2001, U.S. incursions in its traditional Caucasus-Central Asian “turf”, and China’s continuing unease over the Korean Peninsula and Taiwan; this is not to mention China’s fixed gaze at a “new Silk Road” allowing it unfettered access to the Middle East and Eurasia, this as part and parcel of what is often billed as “the new great game” in Eurasia. Indeed, what China’s recent deals with both Kazakhstan (pertaining to Caspian energy) and Iran (pertaining to Persian Gulf resources) signifies is that the pundits had gotten it wrong until now: the purview of the new great game is not limited to the Central Asia-Caspian Sea basin, but rather has a broader, more integrated, purview increasingly enveloping even the Persian Gulf. Increasingly, the image of the Islamic Republic of Iran as a sort of frontline state in a post-Cold War global lineup against U.S. hegemony is becoming prevalent among Chinese and Russian foreign-policy thinkers.

...A glance at Chinese security narratives, and it becomes patently obvious that Beijing shares Iran’s deep worries about U.S. unipolarism culminating in, as in Afghanistan and Iraq, unilateral militarism. Various advocates of U.S. preeminence, such as William Kristol, openly write that the U.S. should “work for the fall of the Communist Party oligarchy in China”. Unhinged from the containment of Soviet power, the roots of U.S. unilateralism, and its military manifestation of “preemption”, must be located in the logic of unipolarism, thinly disguised by the “coalition of the willing” in Iraq; the latter is, in fact, as aptly put by various critics of U.S. foreign policy, more like a coalition of the coerced and bribed than anything else.

[END QUOTING]

Meanwhile, in Iraq, the staggering toll of enforcing the so-called Pax Americana continues to mount. The recent attack on the city of Fallujah is said to have resulted in the deaths of up to 2,000 “insurgents”—but when “insurgents” look just like civilians, who is to say?

It appears that America’s youth are being sacrificed at a far greater rate than is officially acknowledged. Although body armor has prevented many deaths, surviving often means doing without one’s limbs because the extremities are not protected. Further “friendly fire” casualties (too common) don’t count.

[QUOTING:]

#### THE FORGOTTEN CASUALTIES OF WAR: OVER 17,000 U.S. TROOPS WOUNDED DemocracyNow.org, 11/10/04

President Bush predicted victory in Fallujah and wished U.S. soldiers “Godspeed” in their mission as the bloody U.S. assault on the city entered its third day.

His comments came during a visit of wounded soldiers at the Walter Reed Army Medical Center in Washington DC. It was Bush’s sixth visit to wounded troops at the veteran hospital since he launched his so-called “war on terror” in late 2001. He spent two hours with soldiers recuperating from injuries suffered in Iraq and Afghanistan. Bush said, “It’s so uplifting to see their spirit, their drive to become rehabilitated, their love of their country, their support of the mission.”

...The total U.S. death toll in Iraq has surpassed 1,100. While the number of U.S. soldiers killed is widely reported, what is rarely mentioned is the many thousands more wounded.

...Mark Benjamin, UPI Investigations editor: “With respect to the wounded, the Pentagon does report a number that it says is the number of soldiers that are wounded in the war. I think we’re running around 7,000 or 8,000 in Iraq. But what that number does not include is the number of soldiers who are wounded or ill, or injured in operations that are not directly due to the bullets and bombs of the insurgents. So, for example, as of mid-September, if you take actually

Afghanistan and Iraq together, there were 17,000 soldiers who were injured or ill enough to be put on airplanes and flown out of theater, and none of those casualties, and I call them casualties because they fit the Pentagon’s definition of casualties, none of those casualties appear on any public casualty lists.”

[END QUOTING]

Based on this quote, the total number of wounded appears to be running close to 25,000. For what?

This next article is a shocker, even in a world that is demonstrably insane.

[QUOTING:]

#### NEW VACCINE CREATED TO PROTECT WOMEN AGAINST CERVICAL CANCER

NewsFromRussia.com—Pravda, 11/12/04

The scientists have elaborated a new vaccine could prevent the majority of cases of cervical cancer. The vaccine protects against the virus that causes cervical cancer, which kills almost a quarter of a million women worldwide each year.

In a phase II clinical trial, researchers working with GlaxoSmithKline found the vaccine was up to 100 per cent effective for women who received all three of a course of jabs at the correct time.

The vaccine mimics two of the common forms of the human papillomavirus (HPV), teaching the immune system to launch an antibody attack on HPV16 and HPV18. Together, these account for 70 per cent of cases of cervical cancer, reports *New Scientist*.

According to CTV, Dr. Michael Shier, one of the study’s principal investigators and a gynecological oncologist in Toronto, says the impact of the vaccine could reach far beyond eradicating cervical cancer.

“In Canada, once the vaccine is introduced it would virtually eliminate cervical cancer, almost all vaginal cancers, most vulvar cancers, anal cancer in men and women and penile cancer,” Shier says.

Shier says larger, longer trials are needed to confirm the results. He says that once the vaccine is approved, it would theoretically be given to young, healthy women **between the ages of 5 and thirteen.** [!!!!]

...The goal would be to give the vaccine to girls before they are sexually active, Harper said, reports *Bloomberg*.

[END QUOTING]

“Immunizing” 5 year-olds against “sexual” cancers—it’s astounding. Oh, well, “the doctors and scientists say ...”? Absolute madness.

Next: excerpts from a recently rediscovered letter signed by Albert Einstein (Jewish himself, yes).

[QUOTING:]

#### EINSTEIN LETTER WARNING OF ZIONIST FASCISM IN ISRAEL

Rense.com, 11/1/04

December 4, 1948

TO THE EDITORS OF THE NEW YORK TIMES:

...The current visit of Menachem Begin, leader of this party [“Freedom Party” (Tnuat Haherut)], to the United States is obviously calculated to give the impression of American support for his party in the coming Israeli elections, and to cement political ties with

conservative Zionist elements in the United States. Several Americans of national repute have lent their names to welcome his visit. It is inconceivable that those who oppose fascism throughout the world, if correctly informed as to Mr. Begin’s political record and perspectives, could add their names and support to the movement he represents.

...The public avowals of Begin’s party are no guide whatever to its actual character. Today they speak of freedom, democracy and anti-imperialism, whereas until recently they openly preached the doctrine of the Fascist state. It is in its actions that the terrorist party betrays its real character; from its past actions we can judge what it may be expected to do in the future.

A shocking example was their behavior in the Arab village of Deir Yassin. This village, off the main roads and surrounded by Jewish lands, had taken no part in the war, and had even fought off Arab bands who wanted to use the village as their base. On April 9 (*NEW YORK TIMES*), terrorist bands attacked this peaceful village, which was not a military objective in the fighting, killed most of its inhabitants ? 240 men, women, and children—and kept a few of them alive to parade as captives through the streets of Jerusalem. Most of the Jewish community was horrified at the deed, and the Jewish Agency sent a telegram of apology to King Abdullah of Trans-Jordan. But the terrorists, far from being ashamed of their act, were proud of this massacre, publicized it widely, and invited all the foreign correspondents present in the country to view the heaped corpses and the general havoc at Deir Yassin. The Deir Yassin incident exemplifies the character and actions of the Freedom Party.

...During the last years of sporadic anti-British violence, the IZL and Stern groups inaugurated a reign of terror in the Palestine Jewish community. Teachers were beaten up for speaking against them, adults were shot for not letting their children join them. By gangster methods, beatings, window-smashing, and wide-spread robberies, the terrorists intimidated the population and exacted a heavy tribute.

In the light of the foregoing considerations, it is imperative that the truth about Mr. Begin and his movement be made known in this country. It is all the more tragic that the top leadership of American Zionism has refused to campaign against Begin’s efforts, or even to expose to its own constituents the dangers to Israel from support to Begin.

The undersigned therefore take this means of publicly presenting a few salient facts concerning Begin and his party; and of urging all concerned not to support this latest manifestation of fascism.

## Budget Corporate Renewals Notice to Customers

“We are very pleased to announce that the corporation agent BCR (Budget Corporate Renewals) will be, this week, moved into new facilities in Las Vegas, Nevada. This may very well not be permanent positioning as the larger office packages with answering services are established and larger facilities are required. There should be no interruption in service as we merge into a larger management position. Thank you for your patience as there will be no impact other than address information. Phones will remain the same. This is considered a most appropriate forward movement for service and security as the profile is upgraded and ability to handle international developments become mandatory. You who have any association with corporations through BCR will be fully informed timely.”—GCH, 11/15/04

**NEVADA CORPORATIONS:**

# Keeping Shields Up In A Foreign Jurisdiction

Budget's "Tip of the Week" #11:

## Maintaining a Nevada Corporation's Liability Protection in a Foreign Jurisdiction

When using your Nevada corporation in a foreign jurisdiction, what can you do to maintain the strong liability protection afforded under Nevada's statutes?

So-called "**long arm**" laws have been used to claim jurisdiction over "foreign" corporations, stripping away the benefits that would otherwise accrue to them based on the statutes prevailing in their home jurisdiction. These "long arm" laws have been used to great effect in California, for example, ostensibly to protect that state's citizens from encroachments and predatory practices by "outsiders". **Nevada corporations are not immune from this potentially devastating application of the law that would deny them the liability protection inherent in Nevada's Revised Statutes—BUT IT WOULD APPEAR THAT THEY CAN BE.**

Article I, section 10, clause 1 of the *U.S. Constitution* prohibits the states from passing any "law impairing the obligation of contracts". The test for determining a violation of this "contract clause" in the *Constitution* was stated in *Allied Structural Steel Co. v. Spannaus*, 438 U.S. 234 (1978):

**"The first inquiry must be whether the state law has, in fact, operated as a substantial impairment of a contractual relationship. The severity of the impairment measures the height of the hurdle the state legislation must clear. Minimal alteration of contractual obligations may end the inquiry at its first stage. Severe impairment, on the other hand, will push the inquiry to a careful examination of the nature and purpose of the state legislation."**

The solution to retaining the superior liability protection made inherent to Nevada corporations in the *Nevada Revised Statutes* thus appears to be fairly simple:

**AS A PART OF ANY CONTRACT (and remember that a contract does not have to be in writing) WITH ANY ENTITY OR ENTITIES IN A FOREIGN JURISDICTION, ENSURE A CLEAR UNDERSTANDING THAT THE CONTRACT IS TRANSACTED IN NEVADA, AND THAT ANY DISPUTE SHALL BE RESOLVED IN NEVADA.**

You might also want to consider liberal use of the suffix, "a Nevada corporation", which can be appended to your corporation's name to add a measure of protection. In legal terms, there is a "rebuttable presumption" that Nevada law applies to any contract between a Nevada "person" (yes, a corporation IS a "person", by legal definition) and any other entity, so long as the second party is aware of the fact that they are dealing with a Nevada corporation. For this reason alone it can be wise to ensure that the Nevada corporation is identified as such while operating within a foreign jurisdiction.
